INTRODUCTION.

APPROVED Plumbing Appliances, such as are used in the best modern practice, are so varied in character and construction, that we, at considerable expense, issue this catalogue "D," for the convenience of those who either plan or execute plumbing work; the intention being to illustrate and describe, in a concise manner, the line of appliances manufactured and sold by us for use in the plumbing of buildings.

The illustrations show the combinations that are usually furnished together to form a complete apparatus, and will, it is hoped, enable those interested to make any desired selections.

These combinations are, however, only types of those that may be made from the various styles of fittings and appliances that we supply with baths, water-closets, showers, basins, etc., and though a selection may be readily made by reference to the plate numbers, we invite correspondence on this subject where special arrangements are required.

The experience of a quarter of a century, added to a modern plant and skilled craftsmen, gives us unexcelled facilities for manufacturing an unsurpassed, grade of goods, and for furnishing to order special fittings and appliances that may be required in the best modern practice in this branch of sanitary engineering.

In calling attention to the following illustrations, intended to show, so far as possible, the mechanical and structural details of our various manufactures, we desire to emphasize the fact that no illustrations, however skillfully the engraver's and printer's art may be employed, can adequately indicate the advantages of fine workmanship in every detail and part of a sanitary appliance.

Yet this careful workmanship is of the utmost importance to secure the satisfactory working of any apparatus, and it is the attention and labor expended on every mechanical detail of our various specialties that has secured for our manufactures the reputation they have acquired. A critical examination and comparison, therefore, with other appliances said to be similar (and, as illustrated, apparently so,) is urgently requested. Such an examination of actual apparatus will show existing differences that more than justify the apparent difference in price.

In conclusion, we respectfully ask intending buyers to be careful when specifying or ordering goods of our manufacture to give the number of the apparatus, and also the plate number, as shown on the succeeding pages, thus: "The Meyer-Sniffen Co.'s _____ Plate No. ____." This course is calculated to obviate any possible misunderstanding on the part of contractors or even by ourselves, in filling orders.

Respectfully,

THE MEYER-SNIFFEN CO., LIMITED.

NEW YORK, JULY 1, 1895.

TO THE TRADE.

THE prices applied to our Illustrated Catalogue "D," supercede all previous lists. Customers are requested to designate the plate numbers shown therein when ordering goods.

The prices shown herein are for goods as they stand unpacked in our New York warehouse.

Packing, boxing and carting are invariably extra items, and are charged at cost.

All goods are shipped at the risk of the purchaser. Our responsibility ceases when the goods leave our store in good order and are properly receipted for by the transportation agent.

All claims for corrections or deductions from invoices must be made within ten days from receipt of goods.

Whenever an error in shipment occurs customers are requested not to return goods so shipped until they have conferred with the New York office; otherwise they will be held responsible for damages sustained in transportation and must pay freight charges and incidental expenses.

THE MEYER-SNIFFEN CO., LIMITED,

THE "ROYAL" PORCELAIN BATHS.

FOR the past sixteen years we have imported from the famous potteries of Rufford & Co., Stourbridge, England, a large number of their baths.

Experience with the "ROYAL" PORCELAIN BATH justifies us in claiming great superiority over any other make of bath that is *molded* and *glazed* in one piece. In a sanitary point of view too much can hardly be said in favor of their use. The manufacturers, who are the pioneers in this industry, have profited by over thirty years' experience, and are, without doubt, producing the most perfect article of its kind in the world. It is absolutely non-absorbent, being composed of a peculiarly hard body and a glazing that is unsurpassed even in much smaller articles of other manufacture.

The body being of the nature of a fire-brick is a good non-conductor of heat, and consequently the bath requires but little, if any, more hot water than an ordinary tub. The glazing is made of the world renowned Royal Worcester Clay.

THE "ROYAL" PORCELAIN BATH.

ROLL RIM.—GLAZED OUTSIDE.

PLATE 1-C OR 1-D consists of the "ROYAL" Porcelain Glazed Rim Roman Bath, glazed outside, with hot and cold supply fittings, and "Capitol" waste, nickel-plated, and marble feet.

PLATE 2-C OR 2-D consists of the "ROYAL" Porcelain Roll Rim French Shape Bath, glazed outside, with hot and cold supply fittings, and "Capitol" waste, nickel-plated, and marble feet.

DIMENSIONS.

PLATE 1-C OR 1-D.

5-foot bath: length, 5 feet; width, 2 feet 5½ inches. Width of space necessary to include fittings, 2 feet 11 inches.

5½-foot bath: length, 5 feet 6 inches; width, 2 feet 8 inches. Width of space necessary to include fittings, 3 feet 1 inch.

PLATE 2-C OR 2-D.

5-foot bath: length, 5 feet 2 inches; width, 2 feet 7 inches. 6-foot bath: length, 6 feet 2 inches; width, 2 feet 7 inches.

5½-foot bath: length, 5 feet 8 inches; width, 2 feet 7 inches. Add for space necessary to include fittings, 6 inches.

PRICES.

SIZES,	5 Ft.	5½ Ft.	6 Ft.
The "ROYAL" Porcelain Glazed Rim Roman Bath, Plate 1-C or 1-D, as described, . . .	\$295.00	\$300.00	
" " " Roll Rim French Shape Bath, Plate 2-C or 2-D, as described, . . .	270.00	275.00	\$300.00
Add, if fittings are silver-plated,	30.00	30.00	30.00

The "ROYAL" Porcelain Glazed Roll Rim Roman Bath, Plate 20-D, as described,	\$355.00	\$360.00
1¼-inch Italian marble floor slab, 6 feet by 3 feet,	36.00	36.00

THE "ROYAL" PORCELAIN ROMAN BATH. GLAZED ROLL RIM.

Copyright, 1893, by THE MEYER-SNIFFEN CO., Limited.

PLATE 17-D.

PLATE 17-D consists of the "ROYAL" Porcelain Glazed Roll Rim Roman Bath, finished outside in White or Ivory with Gold Bands, Enamel Paint Process, shower and hand-spray, automatic regulating valve, ring and rubber curtain; "Capitol" waste and hot and cold supply fittings—polished brass or nickel-plated—and marble feet.

A feature of this shower apparatus is the arrangement of the hot and cold supply to shower in which the cold water is necessarily turned on first, thus avoiding the possibility of scalding. The hot-water valve can then be used to regulate the temperature of the water.

PRICES.

PLATE 45-D.

PLATE 45-D consists of the "ROYAL" Porcelain Glazed Roll Rim French Shape Bath, finished outside in White or Ivory with Gold Bands, Enamel Paint Process, automatic hand-spray, "Capitol" waste and hot and cold supply fittings—polished brass or nickel-plated—and marble feet.

DIMENSIONS.

5-foot bath: length, 5 feet 2 inches; width, 2 feet 7 inches. 6-foot bath: length, 6 feet 2 inches; width, 2 feet 7 inches.
 5½-foot bath: length, 5 feet 8 inches; width, 2 feet 7 inches. Add for space necessary to include fittings, 6 inches.

When ordering, state if fittings are to be at left as shown, or at the right.

NOTE.—The automatic hand-spray (patented) illustrated with above bath is arranged and constructed so that the cold water must be turned on first, thus insuring the user against being scalded.

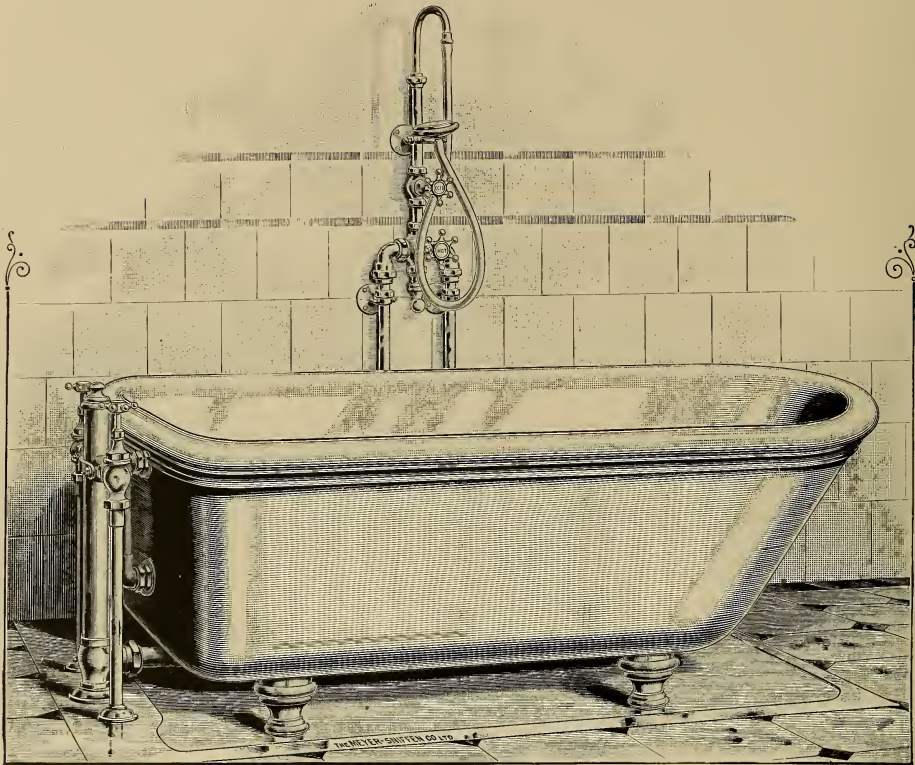

The hot water valve permits the control of the volume of cold water also, so that the temperature of the water let through the shampoo may be regulated by it, and may be used equally as well where the cold water is under the same or greater pressure than the hot.

PORCELAIN ENAMELED IRON BATHS.

THE "PERSIAN,"

THE "PARIAN,"

THE "ARABIAN,"

THE "IONIAN,"

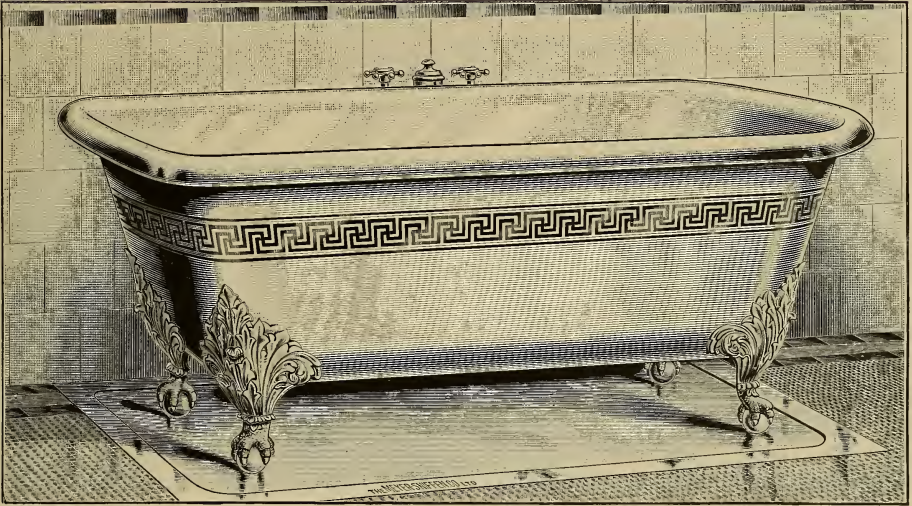

THE "EXIAN."

THE Porcelain Enameled Roll Rim Bath was first introduced in this country by us. Their popularity was instantaneous, and the increased demand has induced many concerns to go into their manufacture.

The Baths furnished by us and shown in the following illustrations are guaranteed to be unsurpassed in quality, and warranted for five years. Special attention is called to our designs, sizes, and SUPERIOR supply and waste valves and trimmings, which make up the value of a complete bath.

THE "PERSIAN" PORCELAIN ENAMELED IRON BATH.

PLATE 90-D.

PLATE 90-D consists of the "PARIAN" Porcelain Enameled Iron Bath, finished outside in Enamel Paint Process, White or Ivory, with Gold Bands; automatic hand-spray, "Capitol" waste and hot and cold supply fittings—nickel-plated or polished brass.

The supports of the "PARIAN" Bath rest on china balls (patented), which protect the floor from all possible corrosive stains, besides enhancing the artistic effect of this elegant fixture.

DIMENSIONS.

Sizes, $4\frac{1}{2}$ feet 5 feet, $5\frac{1}{2}$ feet, 6 feet, and $6\frac{1}{2}$ feet length over rim. Add 4 inches to include fittings. Width, 2 feet 5 inches over rim.

When ordering, state if fittings are to be at left as shown, or at the right.

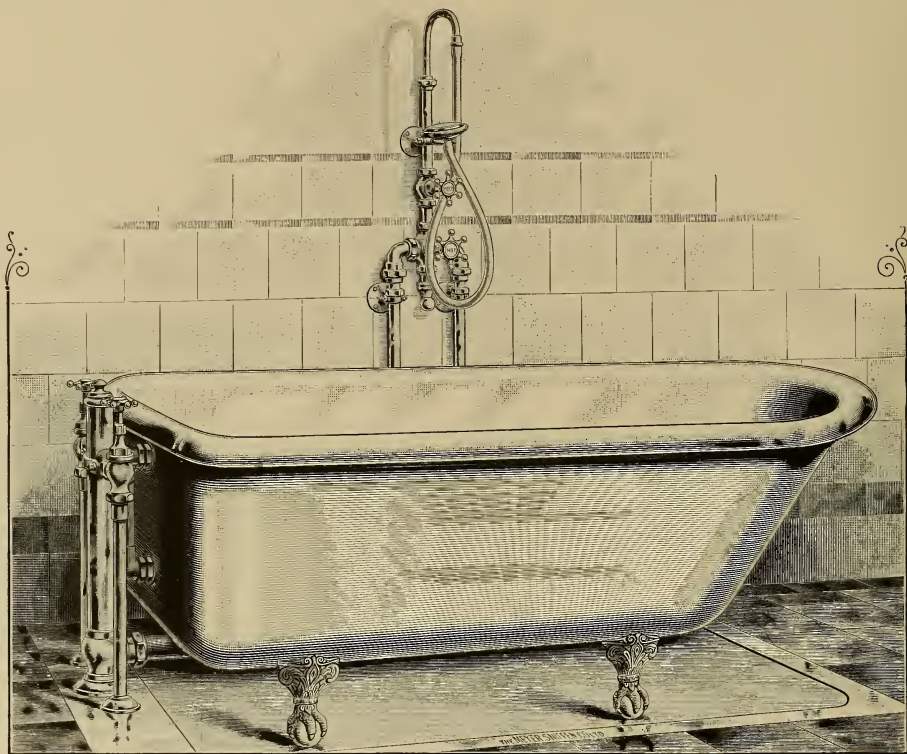

NOTE.—The automatic hand-spray (patented) illustrated with above bath is arranged and constructed so that the cold water must be turned on first, thus insuring the user against being scalded.

The hot-water valve permits the control of the volume of cold water also, so that the temperature of the water let through the shampoo may be regulated by it.

COMBINATION NEEDLE AND LIVER SPRAY BATH, WITH SHOWER, DOUCHE AND BIDET.

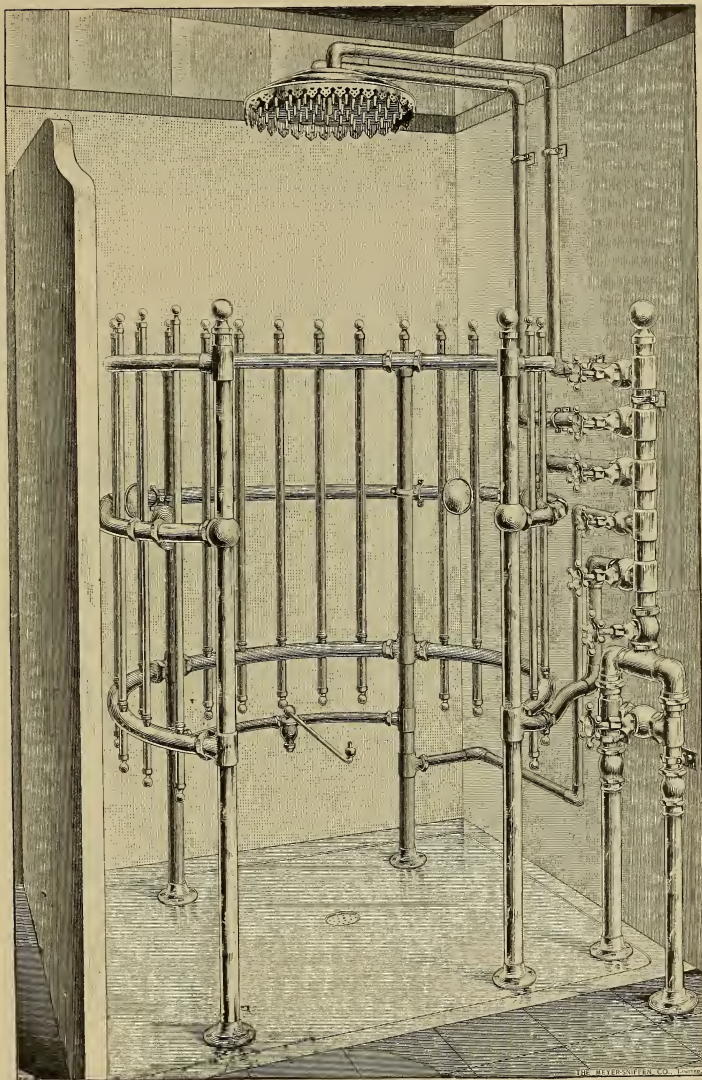

PLATE 146-D.

PLATE 146-D consists of the Combination Needle and Liver Spray Bath, with Shower, Descending and Ascending Douche—nickle-plated. It represents a most complete apparatus intended for Turkish Bath establishments and Athletic Clubs. The arrangement of the valves is such that the cold water must be turned on first, thus avoiding the danger of the user accidentally being scalded. The "Bidet," or ascending douche, is swung out of the way when not in use. A separate valve controls each feature independent of the others. The vertical perforated pipes (needle spray) are readily detached for cleansing.

DIMENSIONS.

Height to top of shower, 8 feet. Diameter of needle bath, 4 feet.

PRICE.

Plate 146-D, as described,

Price does not include marble.

\$575.00

COMBINATION NEEDLE SPRAY, SHOWER, DOUCHE AND BIDET.
TO STAND ON FLOOR.
WITH RUBBER CURTAIN.

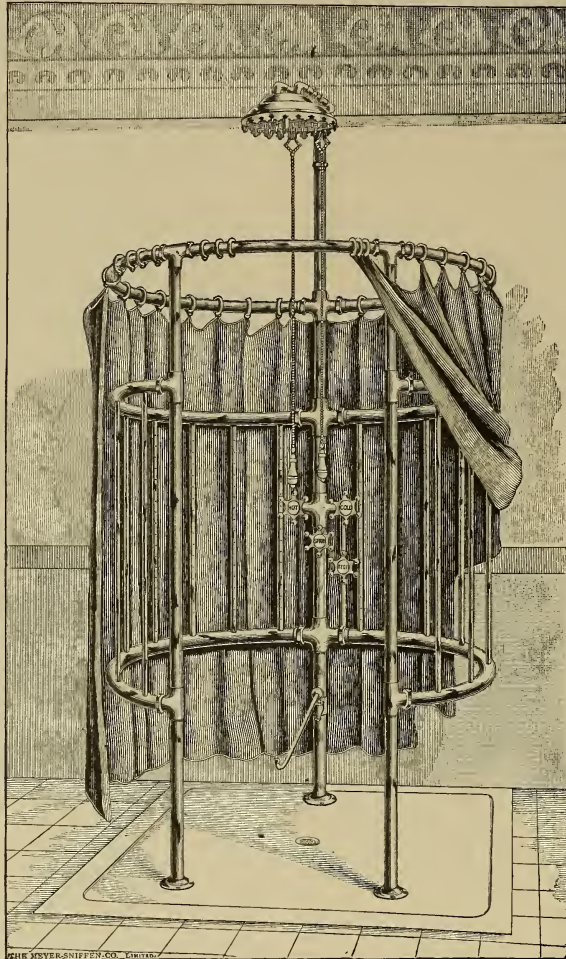

PLATE 147-D.

PLATE 147-D consists of the Combination Needle Spray, Shower, Descending and Ascending Douche, to stand on floor, with rubber curtain—nickel-plated. Hot and cold water is supplied to each feature of the Bath and can be controlled separately—i. e., needle spray, shower, descending douche, and bidet or ascending douche. The needle-spray pipes may be easily removed for cleansing if necessary. If this Bath is desired to be fitted in a marble stall or room, the upper ring and curtain may be dispensed with. The supply valves may be located on either side if preferred, instead of at the back.

DIMENSIONS.

Height to top of shower, 7 feet 6 inches. Diameter of needle bath, 3 feet 4 inches.

PRICE.

Plate 147-D, as described, \$235.00

Price does not include marble.

COMBINATION NEEDLE SPRAY, SHOWER AND DOUCHE.
TO STAND ON FLOOR.
WITH RUBBER CURTAIN.

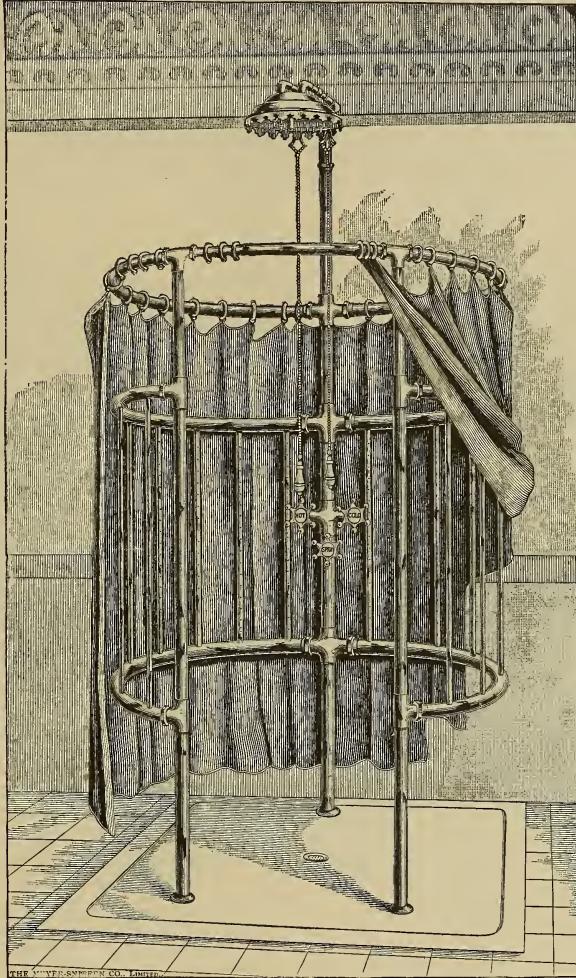

PLATE 148-D.

PLATE 148-D consists of the Combination Needle Spray, Shower and Douche, to stand on floor, with rubber curtain—nickel-plated. The illustration represents a simple and perfect apparatus. All the vertical pipes are perforated, including the two columns in the foreground. On turning on the hot and cold water valves the water enters the central vertical column, which acts as a mixing chamber. A shower or douche may be had by operating one or the other of the pulls. One valve controls the needle spray, which is directed from each vertical column toward the center. The pipes are so constructed that they may be taken out for cleansing if necessary. If desired the supply valves may be placed on either of the front columns instead of at the back.

DIMENSIONS.

Height to top of floor, 7 feet 6 inches. Diameter of needle bath, 3 feet 4 inches.

PRICE.

PLATE 148-D, as described, \$225.00

Price does not include marble.

COMBINATION NEEDLE SPRAY, SHOWER AND DOUCHE,
WITH RUBBER CURTAIN.

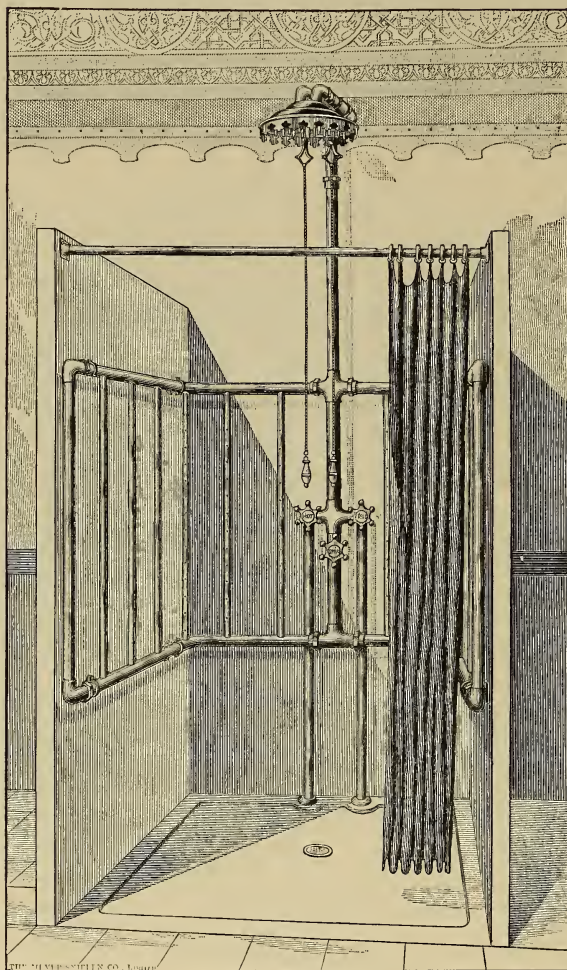

PLATE 149-D.

PLATE 149-D consists of a Combination Needle Spray, Shower and Douche, with rod and rubber curtain—all pipes nickel-plated. The illustration represents an apparatus intended to be set up with marble sides and back. The curtain in front can be drawn across when in use. All the vertical pipes are perforated, forming the needle spray, and are easily removed, if necessary, for cleaning. The shower and douche are operated by a pull and chain for each, and a bidet, or ascending douche, can be added to the apparatus if desired.

Needle Baths of this description will be made to order to suit any recess or corner.

DIMENSIONS.

Height to top of shower, 7 feet 6 inches. Diameter of needle bath, 3 feet.

PRICE.

PLATE 149-D, as described, \$200.00

SHOWER APPARATUS, WITH AUTOMATIC REGULATING VALVE.

PATENTED.

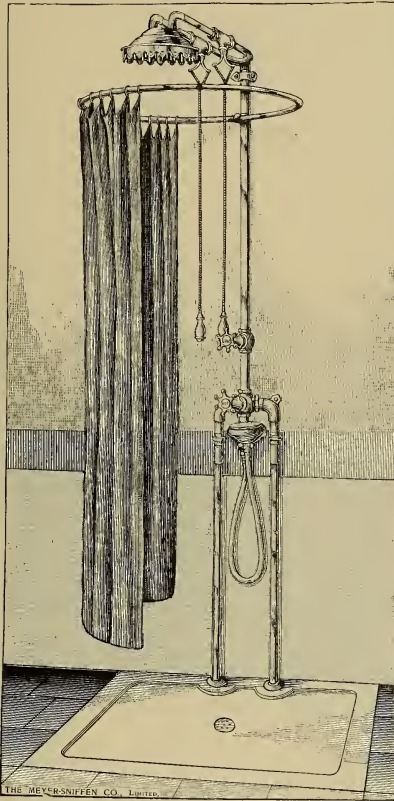

The Cold Water Valve Must be Opened Before the Hot Water Will Run.

PLATE 150-D.

PLATE 150-D consists of Combination Shower, Douche and Hand-spray, with automatic regulating valve, ring and rubber curtain.

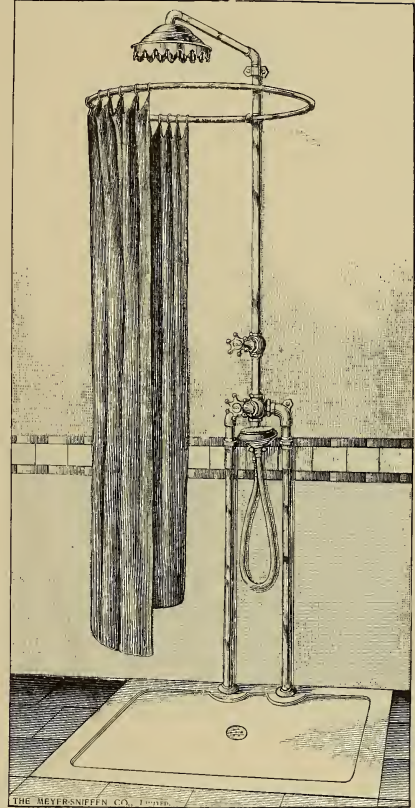

PLATE 151-D.

PLATE 151-D consists of Combination Shower, with automatic regulating valve and hand-spray attachment, ring and rubber curtain—nickel-plated.

It is not only desirable but quite necessary, in a shower or shampoo apparatus, to provide against the user being accidentally scalded. With the above illustrated apparatus this desideratum can be accomplished, as the arrangement is such that the cold water must be turned on first, and the hot water is mixed with the cold when the "hot" valve is opened.

The construction of the hot water valve permits the control of the volume of the cold water also, so that the temperature of the water let through the shower or shampoo may be regulated by it. The construction is also such that the hot or cold water cannot pass back into the opposite pipe, and the apparatus may be used equally as well where the cold water is under the same or greater pressure than the hot.

DIMENSIONS.

Height, 7 feet 3 inches. Distance from wall to center of shower, 18 inches.

PRICE.

Plate 150-D, as described,	\$74.50
" 151-D, " "	59.50

NICKEL-PLATED BRASS SHOWERS.

WITH DOUCHE AND HAND SPRAY.

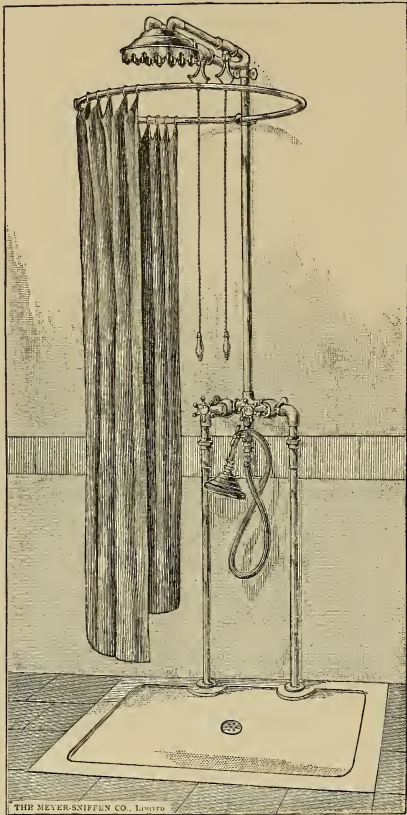

PLATE 156-D.

PLATE 156-D consists of a Nickel-plated Brass Shower, with douche, hand-spray, pulls and chains, ring and rubber curtain.

These showers are extra well made. The pipes are $\frac{3}{4}$ -inch size, and the hot and cold valves are specially constructed to seat easily and have large six-arm handles. They are adapted for use over a bath tub, or, as illustrated, for Bathing Establishments, Club Houses or Private Dwellings.

The arrangement is such that in turning on the hot and cold valves the water enters the upright pipe, which acts as a mixing chamber, and will not descend from the shower until the pull is operated.

An important feature with our showers is an arrangement preventing either the hot or cold water from passing back through the opposite pipe should the valves be left open accidentally.

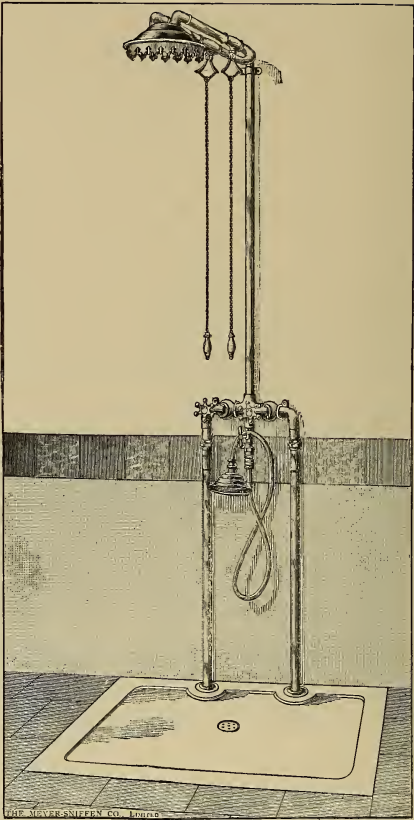

PLATE 157-D.

PLATE 157-D consists of a Nickel-plated Brass Shower, with douche, hand-spray, pulls and chains.

THE "EM-ESS" BIDET.

WITH

PATENT REGULATING VALVE.

Copyright, 1895, by THE MEYER-SNIFFEN Co., Limited.

PLATE 164 - D.

PLATE 164-D consists of the "EM-Ess" Bidet Apparatus for hot and cold water supplied through wali, with patent regulating valve. The "EM-Ess" is furnished to fit any open water-closet.

The special feature of this Bidet is the arrangement of the hot and cold supply valves, in which the cold water must be turned on first, thus avoiding the possibility of scalding the user. The hot water valve can then be used to regulate the temperature of the water.

The "EM-Ess" Bidet Apparatus does not interfere with the operation of the water-closet. When it is not in use the handle is pushed down, which turns the jet tube under the rim of the bowl.

In ordering, the character and dimensions of water-closet that it is to be fitted to must be given.

THE "BRIGHTON" WATER-CLOSET.

IMPROVED.

PATENTED.

THE accompanying cuts illustrate the Improved "BRIGHTON" Water-Closet Apparatus. The success of the "BRIGHTON" Water-Closet, and the various styles of apparatus of which it is a part, during the last fourteen years, has led to the introduction of many imitations alleged to be just as good and cheaper, but which lack the quality and character, not only of the earthenware but also of the tank and fittings, that go to make a substantial and durable apparatus.

All Water-Closet Apparatus of our manufacture are guaranteed by us for five years; in fact, for obvious reasons, with the exception possibly of a washer on the ball cock or valve—a trifling matter—they ought, after fifteen years' use, to be in as good a condition as when put in. We can refer to many of our Water-Closet Apparatus now in use for over ten years that are "as good as new."

Special attention is called to the *Improved Pedestal* form of the "BRIGHTON" Water-Closet, which is constructed on the same lines and measurements as the former shape, except that the trap is enclosed, as shown in succeeding illustrations, adding greatly to the strength of the closet, and making it much easier to be kept free from dust or dirt.

We are prepared to furnish any style or size of cistern or tank for our Water-Closets that may be required, or any special size, valve or fittings, where the plumber is required to line the cistern, but we do not sell our Water-Closets singly, and unaccompanied by the proper tank or fittings, except for repairs in case of breakages, where a special price will be quoted.

NOTE.—"VITREAN" WARE.

All water-closets now furnished by us are made of a non-porous body, designated as "VITREAN" ware. This ware is practically imperishable from use or age, and will not craze or discolor. Being non-absorbent it is considered superior to any other domestic or imported earthenware.

THE "BRIGHTON" WATER-CLOSET.

 PLATE 44-C OR 165-D.

PLATE 44-C OR 165-D consists of the Improved "BRIGHTON" Water-Closet, EMBOSSED, Ivory tinted and decorated in gold lines, with patent brass floor connection, brass curved "back-air" pipe to wall, design "D" tank, with brass brackets, brass flush pipe, quartered oak seat and cover, and brass supporting arms.

The "BRIGHTON" Water-Closet decorated in Ivory and Gold is now furnished in pedestal form, and supplied with "ANNEX" seat, and designs of tanks illustrated on pages 160 to 164.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

For description of "ANNEX" seat see page 165.

THE "BRIGHTON" WATER-CLOSET, EMBOSSED, DECORATED WITH PINK AND GOLD.

THE "BRIGHTON" WATER-CLOSET.

PATENTED.

WITH ANNEX SEAT.

THE "BRIGHTON" WATER-CLOSET.

The above illustration of the "BRIGHTON" Water-Closet, fitted with our new open seat, is intended to show, as nearly as possible, its peculiar features and practical working. A view of the interior shows how the flushing water is delivered at the moment of starting the flush.

It will be seen that there is ample water in the bowl and an adequate seal to the trap. A unique and important feature is the arrangement of the special jets below the flush pipe, which wash down this portion of the closet before the discharge from the bowl can come in contact with the outgo. The flush pipe is arranged to be connected to the bowl by a slip expansion joint.

The back-air or vent connection (not shown in cut) is supplied either right or left side as desired, and is located in the best possible position, and is full two inches in size. The coupling is furnished ground or may be had "slip-joint."

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

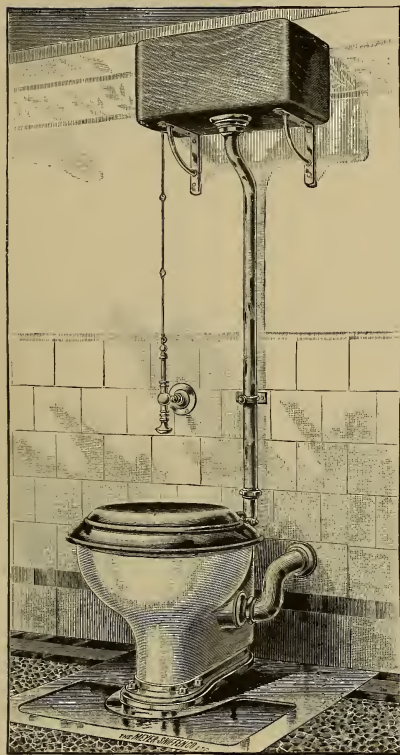

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware of the closet is prevented—an advantage possessed by no other closet seat on the market.

NOTE.—The "BRIGHTON" Water-Closet is now made with the trap encased in a pedestal, adding greatly to the strength of the closet, and making it much easier to be kept free from dust or dirt.

THE "BRIGHTON" WATER-CLOSET.

PATENTED.

IMPROVED PEDESTAL PATTERN.

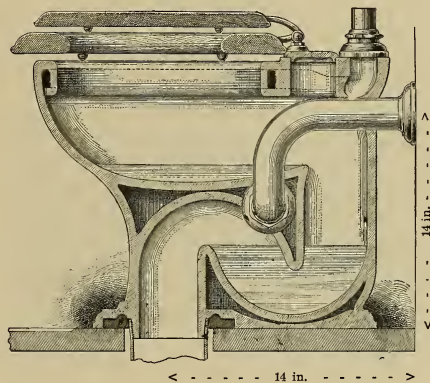

Copyright, 1894, by THE MEYER-SNIFFEN Co., Limited.

PLATE 168-D.

Particular attention is called to the sectional cut below of the "BRIGHTON" Water-Closet, Improved Pedestal pattern, showing how the trap is made and encased by the base of the closet, and formed in one piece with it. The trap vent or "back-air" being so located that it cannot become obstructed.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

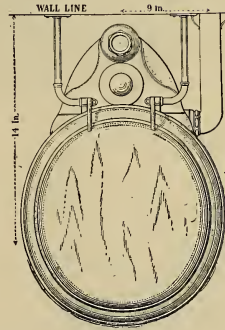

PLATE 176-D.

PLATE 176-D consists of the "BRIGHTON" Water-Closet, Improved Pedestal form, with patent brass floor connection, round cornered, design "A" tank, brass brackets, brass flush pipe, pull and chain of brass wire, No. 12 Seat without cover, and straight "back air" to wall. All trimmings nickel-plated.

The Improved Pedestal form of the "BRIGHTON" Water-Closet is constructed on the same lines and measurements as the former shape except that the trap is enclosed, as shown in the above illustration, adding great strength to the closet, and making it much easier to be kept free from dust or dirt.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation, and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

THE NO. 12 SEAT.

In our No. 12 Seat all superfluous woodwork is dispensed with. Special brass adjustable brackets are designed to hold the seat firmly to the wall. The seat conforms to the shape of the bowl, leaving an unobstructed open space around the closet, so that all exterior parts may be easily cleaned, making it a perfectly sanitary as well as substantial fixture.

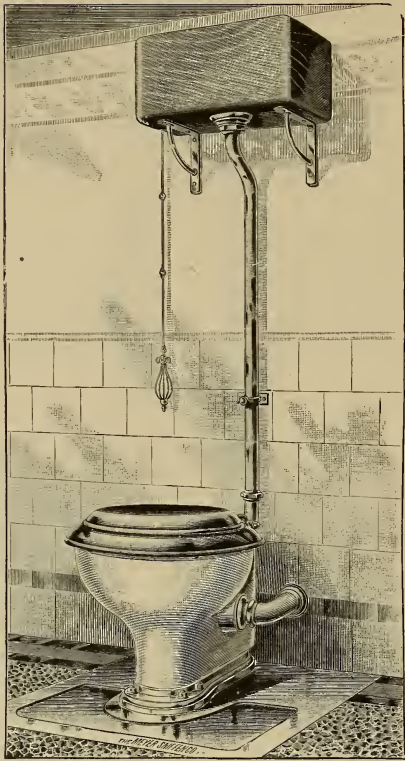

PRICES.

The "BRIGHTON" Water-Closet, Plate 176-D, as described,	\$67.50
Add, if woodwork is mahogany or bird's-eye maple,	5.00
Add, for 1¼-inch Italian marble floor slab, 27x27 inches,	9.00

PLATE 177-D.

PLATE 177-D consists of the "BRIGHTON" Water-Closet, Improved Pedestal form, with patent brass floor connection, round cornered, design "A" tank, brass brackets, brass flush pipe, pull and chain of brass wire, "ANNEX" Seat with cover, and straight "back air" to wall. All trimmings nickel-plated.

The Improved Pedestal form of the "BRIGHTON" Water-Closet is constructed on the same lines and measurements as the former shape except that the trap is enclosed, as shown in the above illustration, adding great strength to the closet and making it much easier to be kept free from dust or dirt.

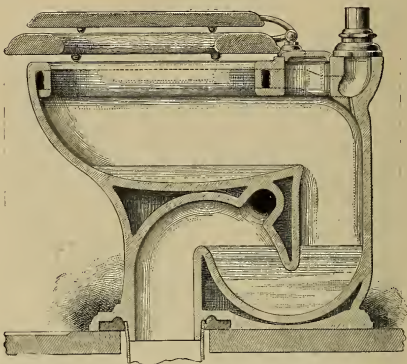

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation. and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

Particular attention is called to the sectional cut below of the "BRIGHTON" Water-Closet, Improved Pedestal pattern, showing how the trap is made and encased by the base of the closet, and formed in one piece with it. The trap vent or "back-air" being so located that it cannot become obstructed.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

SECTIONAL VIEW OF THE "BRIGHTON" WATER-CLOSET, IMPROVED PEDESTAL PATTERN, WITH "ANNEX" SEAT AND COVER.

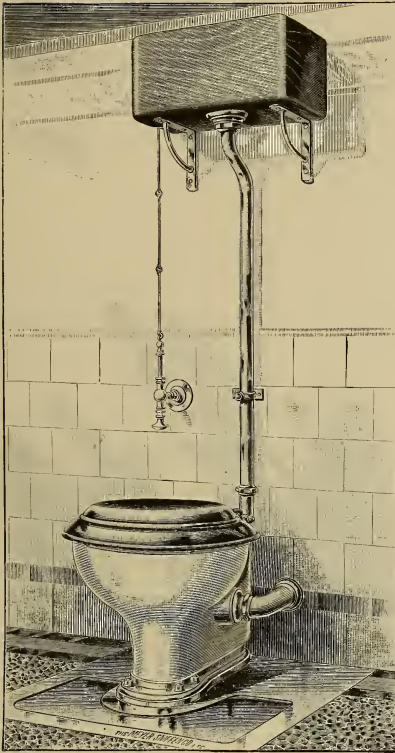

PRICES.

The "BRIGHTON" Water-Closet Apparatus, Plate 177-D, as described	\$71.00

All trimmings nickel-plated.

The Improved Pedestal form of the "BRIGHTON" Water-Closet is constructed on the same lines and measurements as the former shape except that the trap is enclosed, as shown in the above illustration, adding great strength to the closet, and making it much easier to be kept free from dust or dirt.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PRICES.

The "BRIGHTON" Water-Closet Apparatus, Plate 193-D, as described,	\$82.00
Add, if woodwork is mahogany or bird's-eye maple,	5.00
Add, for 1 1/4-inch Italian marble floor slab, 27x27 inches,	9.00

Particular attention is called to the sectional cut below of the "BRIGHTON" Water-Closet, Improved Pedestal pattern, showing how the trap is made and encased by the base of the closet, and formed in one piece with it. The trap vent or "back-air" being so located that it cannot become obstructed.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

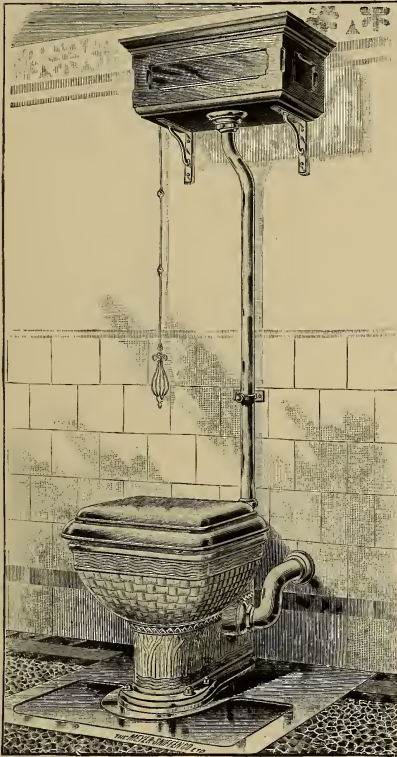

SECTIONAL VIEW OF THE "BRIGHTON" WATER-CLOSET, IMPROVED PEDESTAL PATTERN, WITH CURVED "BACK-AIR" TO WALL, AND "ANNEX" SEAT AND COVER.

THE "VORTEX" SYPHON WATER-CLOSET.

PATENTED.

THE "VORTEX" WATER-CLOSET is the outcome of the demand for a simple deep seal bowl, that will flush-out quickly and noiselessly, and operate under any of the conditions that a wash-out water-closet is adapted to. The "VORTEX" is the result of a series of severe practical experiments with that object in view, and we believe it to be unsurpassed by any other syphon closet in the market. It has also many features, not possessed by any other closet, that must be seen to be appreciated.

The tanks furnished with the "VORTEX" Water-Closets are so constructed that a momentary pull of the handle effects the thorough flushing of the closet. The syphon in the tank (recently improved and patented by us) is practically silent in operation, and so simple that it cannot get out of order.

NOTE—"VITREAN" WARE.

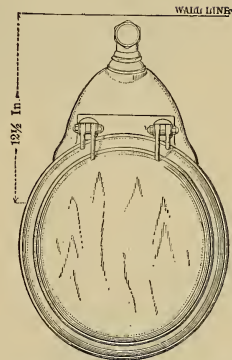

All water-closets now furnished by us are made of a non-porous body, designated as "VITREAN" ware. This ware is practically imperishable from use or age, and will not craze or discolor. Being non-absorbent it is considered superior to any other domestic or imported earthenware.

THE "VORTEX" SYPHON JET WATER-CLOSET WITH ANNEX SEAT.

Add, for 1 1/4-inch Italian marble floor slab, 27x27 inches,	9.00

THE "VORTEX" SYPHON JET WATER-CLOSET

WITH ANNEX SEAT AND LOCAL VENT.

Copyright, 1894, by THE MEYER-SNIFFEN Co., Limited.

PLATE 210-D.

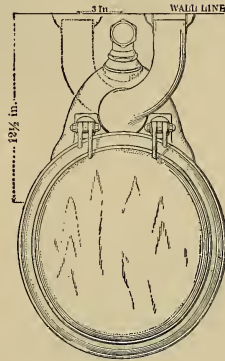

PLATE 210-D consists of the "VORTEX" Syphon Jet Water-Closet, with patent brass floor connection, round cornered, design "A" tank, brass brackets, brass flush pipe, with bracket guide for pull, and chain of brass wire, "ANNEX" Seat with cover, and porcelain local vent connection. All trimmings nickel-plated.

The arrangement of the local vent connection is one of the important features of the above apparatus. The opening (3 inches in diameter) is at the back of the bowl, and level with the flushing rim, so that the water cannot overflow through the local vent pipe. The porcelain connection can be furnished right or left as desired.

The tanks furnished with the "VORTEX" Water-Closets are so constructed that a momentary pull of the handle effects the thorough flushing of the closet. The syphon in the tank (recently improved and patented by us) is practically silent in operation, and so simple that it cannot get out of order.

The great depth of water in the bowl of the "VORTEX" (5 to 6 inches) forms an efficient seal against the passage of sewer air, and more than enough to thoroughly submerge any deposit of fecal matter.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

THE "ANNEX" SEAT.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

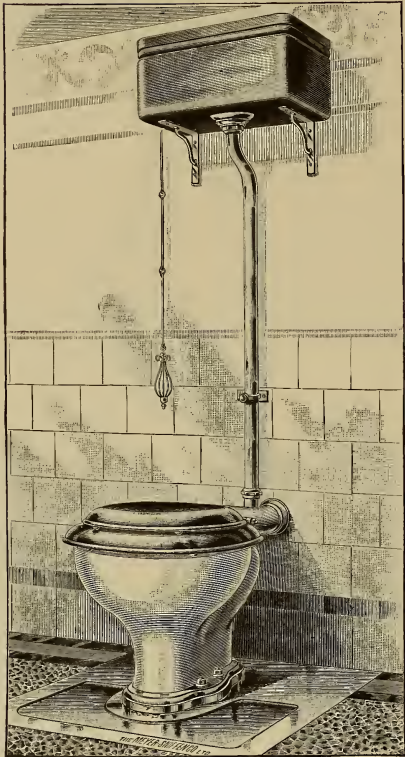

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

PRICES.

All trimmings nickel-plated.

There are often cases where it is advisable or necessary to have the "back-air" or "trap-vent" connection above the floor. As shown in the above illustration, our patented connection ventilates the trap without interfering with the operation of the closet, and is so located that it cannot become obstructed.

The tanks furnished with the "VORTEX" Water-Closets are so constructed that a momentary pull of the handle effects the thorough flushing of the closet. The syphon in the tank (recently improved and patented by us) is practically silent in operation, and so simple that it cannot get out of order.

The great depth of water in the bowl of the "VORTEX" (5 to 6 inches) forms an efficient seal against the passage of sewer air, and more than enough to thoroughly submerge any deposit of fecal matter.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

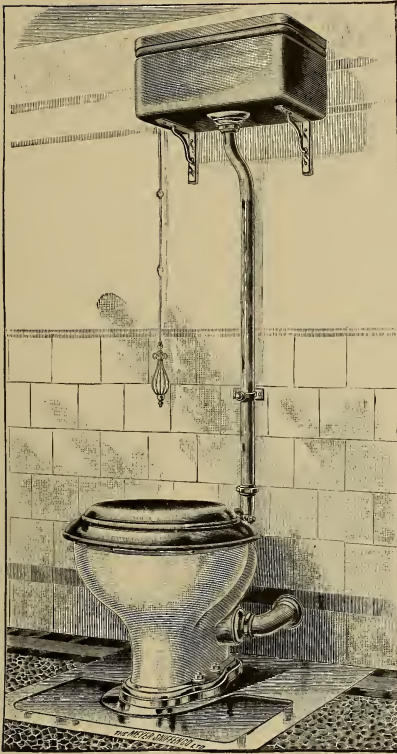

SECTIONAL VIEW OF THE "VORTEX" WATER-CLOSET, WITH TRAP VENT AND PIPE TO WALL, AND "ANNEX" SEAT AND COVER.

PLATE 226-D.

THE "ANNEX" SEAT.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

PLATE 226-D consists of the Embossed "VORTEX" Syphon Jet Water-Closet, with patent brass floor connection, round cornered, design "D" tank, brass brackets, brass flush pipe, with bracket guide for pull, and chain of brass wire, "ANNEX" Seat with cover, and straight "back-air" to wall. All trimmings nickel-plated.

THE "PEMBERTON" WATER-CLOSET.

PATENTED.

IT is often desirable to have the trap portion of a Water-Closet of metal, so that it may be connected to the soil pipe system and thus become a part of the same, with the result that the joint of the bowl, the earthenware portion, will then be on the house side of the trap, and an accidental leak at that point will not be of a serious nature.

We offer the "PEMBERTON," as undoubtedly the first and most favorably known of this class of water-closet, to meet all such requirements. The Bowl of the "PEMBERTON" is identical with the "BRIGHTON," and has all the special features peculiar to it, with the addition of a separate trap of different material and construction to suit the special conditions referred to.

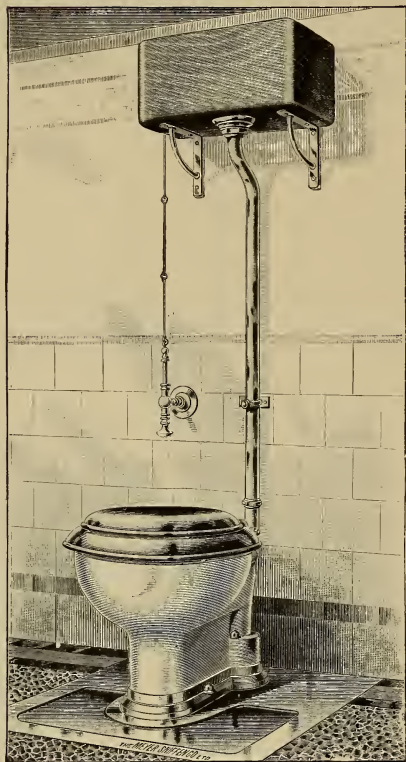

NOTE.—"VITREAN" WARE.

All water-closets now furnished by us are made of a non-porous body, designated as "VITREAN" ware. This ware is practically imperishable from use or age, and will not craze or discolor. Being non-absorbent it is considered superior to any other domestic or imported earthenware.

THE "PEMBERTON" WATER-CLOSET.

PATENTED.

IMPROVED PEDESTAL PATTERN.

Copyright, 194, by THE MEYER-SNIFFEN CO., Limited.

PLATE 246-D.

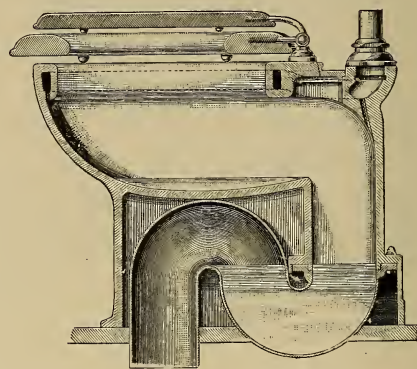

PLATE 246-D consists of the "PEMBERTON" Improved Pedestal Water-Closet, with flexible metal trap, round cornered, design "A" tank, brass brackets, brass flush pipe, with bracket guide for pull and wire, "ANNEX" Seat with cover. All trimmings nickel-plated.

The "PEMBERTON" Improved Pedestal is undoubtedly the best form of water-closet in which the base of the closet encases a metal trap. The base is so made as to completely cover the trap (which feature has been recently patented by us), thereby gaining the cleanliness of an all-porcelain water-closet.

The practical operation of the "PEMBERTON" is exactly the same as the Improved "BRIGHTON," which, in regard to depth of water in the bowl and means of flushing all parts of the closet, is unsurpassed by any other make. The flexible trap furnished (eight-pound lead) is of a special form, made to be easily and perfectly connected to the bowl.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation, and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PATENTED.

IMPROVED PEDESTAL PATTERN.

Copyright, 1894, by THE MEYER-SNIFFEN CO., Limited.

PLATE 247-D.

THE "ANNEX" SEAT.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented — an advantage possessed by no other closet seat on the market.

PLATE 247-D consists of the "PEMBERTON" Improved Pedestal Water-Closet, with flexible metal trap, round cornered, design "A" tank, brass brackets, brass flush pipe, pull and chain of brass wire, "ANNEX" Seat with cover. All trimmings nickel-plated.

The "PEMBERTON" Improved Pedestal is undoubtedly the best form of water-closet in which the base of the closet encases a metal trap. The base is so made as to completely cover the trap (which feature has been recently patented by us), thereby gaining the cleanliness of an all-porcelain water-closet.

The practical operation of the "PEMBERTON" is exactly the same as the Improved "BRIGHTON," which, in regard to depth of the water in the bowl and means of flushing all parts of the closet, is unsurpassed by any other make. The flexible trap furnished (eight-pound lead) is of a special form, made to be easily and perfectly connected to the bowl.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PLATE 248-D.

PLATE 248-D consists of the "PEMBERTON" Improved Pedestal Water-Closet, with flexible metal trap, paneled tank, brass brackets, brass flush pipe, pull and chain of brass wire, "ANNEX" Seat with cover. All trimmings nickel plated.

The "PEMBERTON" Improved Pedestal is undoubtedly the best form of water-closet in which the base of the closet encases a metal trap. The base is so made as to completely cover the trap (which feature has been recently patented by us), thereby gaining the cleanliness of an all-porcelain water-closet.

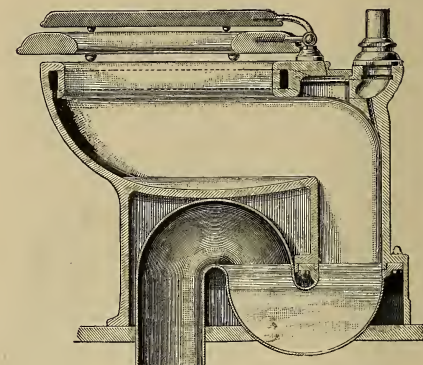

The practical operation of the "PEMBERTON" is exactly the same as the Improved "BRIGHTON," which, in regard to depth of the water in the bowl and means of flushing all parts of the closet, is unsurpassed by any other make. The flexible trap furnished (eight-pound lead) is of a special form, made to be easily and perfectly connected to the bowl.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation and cannot get out of order.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PRICES.

The "PEMBERTON" Water-Closet Apparatus, Plate 248-D, as described,	\$83.50
Add, if woodwork is mahogany or bird's-eye maple,	5.00
Add, for 14-inch Italian marble floor slab, 27x27 inches,	9.00

PLATE 249-D.

THE "ANNEX" SEAT.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

PLATE 249-D consists of the "PEMBERTON" Improved Pedestal Water-Closet, with flexible metal trap, round cornered, design "E" tank, brass brackets, brass flush pipe, with bracket guide for pull, and chain of brass wire, "ANNEX" Seat with cover. All trimmings nickel-plated.

The "PEMBERTON" Improved Pedestal is undoubtedly the best form of water-closet in which the base of the closet encases a metal trap. The base is so made as to completely cover the trap (which feature has been recently patented by us), thereby gaining the cleanliness of an all-porcelain water-closet.

The practical operation of the "PEMBERTON" is exactly the same as the Improved "BRIGHTON," which, in regard to depth of the water in the bowl and means of flushing all parts of the closet, is unsurpassed by any other make. PLATE 258-D.

PLATE 258-D consists of the "PEMBERTON" Water-Closet, with Iron Trap to calk in, No. 10 copper-lined tank, brackets, chain and pull—no flush pipe.

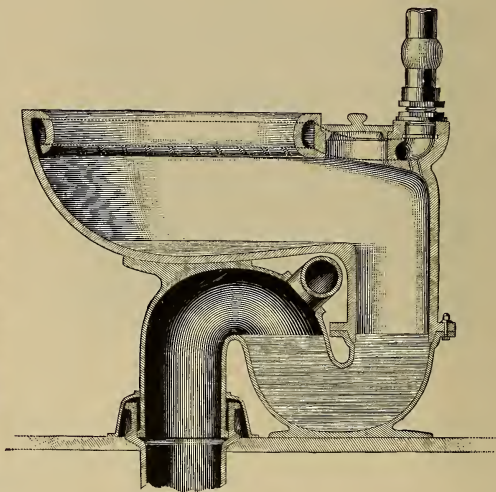

NOTE.—The seats, tanks, and trimming as furnished with our other water-closet apparatus can be supplied with the above closet.

The practical operation of the "PEMBERTON" is exactly the same as the Improved "BRIGHTON," which, in regard to depth of water in the bowl and means of flushing all parts of the closet, is unsurpassed by any other make.

PRICE.

The "PEMBERTON" Water-Closet, Plate 258-D, as described,

\$35.00

THE "PEMBERTON" WATER-CLOSET.

PATENTED.

WITH PATENT ADJUSTABLE TRAP.

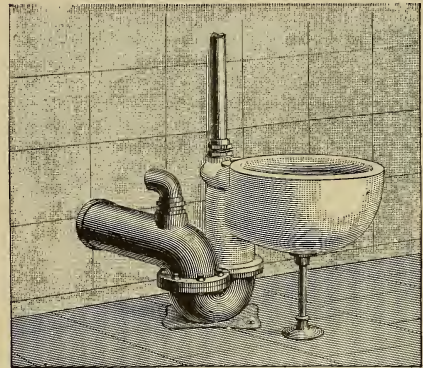

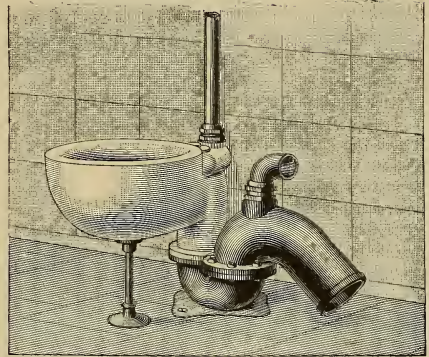

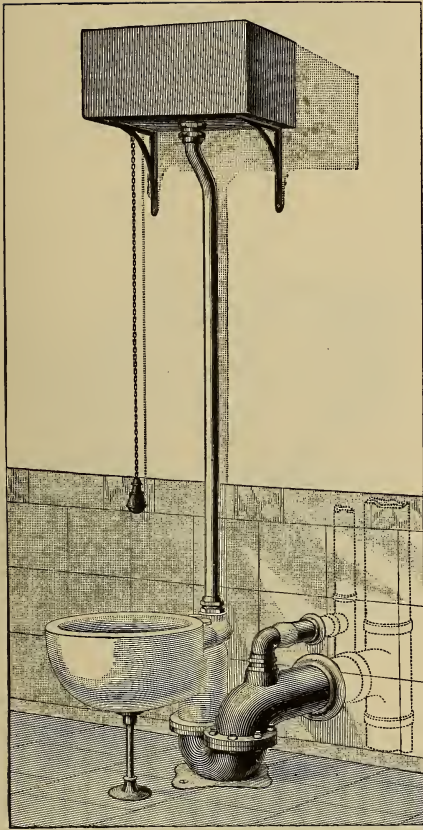

PLATE 259-D.

PLATE 259-D consists of the "PEMBERTON" Water-Closet, with patent adjustable iron traps and support, copper-lined tank, japped brackets, pull and chain. Either the $\frac{1}{2}$ -S, $\frac{3}{4}$ -S, or full-S trap can be furnished.

It is often desirable to have the trap of the water-closet enter the soil-pipe above the floor on which it stands, or to have the closet set directly on a beam. This has heretofore been impossible with most of the better forms of water-closets. With the Adjustable Trap (patented) here offered, the opening of the soil-pipe may be located on either side or back of the closet, above the floor line, or alongside of the beam (thereby avoiding the necessity of cutting same), and connected directly to the trap of the water-closet by calking into the pipe in the usual way. The trap is iron, porcelain-lined and securely bolted.

The Trap is so constructed that a connection can be made to the soil-pipe at almost any angle.

The seats, tanks, and trimming as furnished with our other water-closet apparatus can be supplied with the above closet.

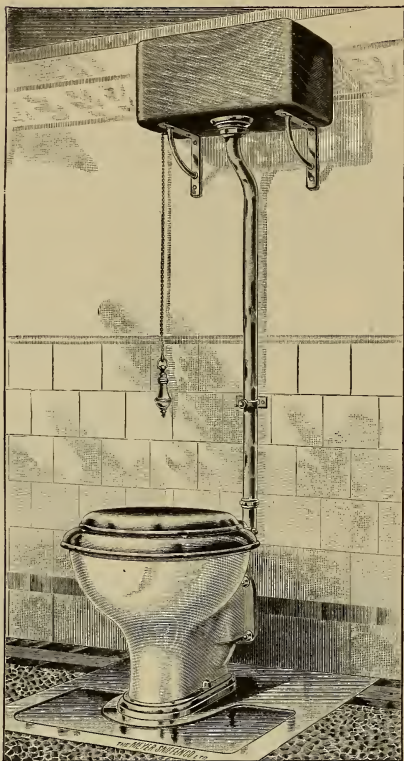

PRICE.

The "PEMBERTON" Water-Closet, Plate 259-D, with either $\frac{1}{2}$ -S, $\frac{3}{4}$ -S, or full-S trap, \$40.00

THE "HELLYER-OXFORD" WATER-CLOSET.

PATENTED.

WITH ANNEX SEAT.

Copyright, 1894, by THE MEYER-SNIFFEN Co., Limited.

PLATE 260-D.

PLATE 260-D consists of the Improved "HELLYER-OXFORD" Water-Closet, patent brass connection and coupling, No. 9 or 10 design "A" tank, brass brackets, brass flush pipe, chain and ivory celluloid pull, and "ANNEX" Seat with cover. All trimmings nickel-plated.

Water-closet bowls with connections for seat ventilation are furnished if desired.

The No. 9 tank is so constructed that a momentary pull of the handle effects the thorough flushing of the closet. It is practically silent in operation and cannot get out of order.

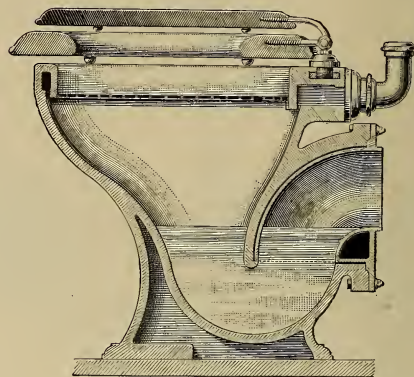

The No. 10 tank requires to be held a few seconds to thoroughly flush out the closet (the water stopping immediately when the handle is released).

The "HELLYER-OXFORD" Improved, as the illustration shows, is an all earthenware water closet, with bowl and trap portion in one piece, having the outlet at the back, and so constructed that the soil pipe may be connected to the closet in such a manner that the joint connecting the soil pipe is below the water line, thus making an indisputable and positive connection with the soil pipe, at the same time retaining the appearance and outside cleanliness of the all-earthen closet.

The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PRICES.

The "HELLYER-OXFORD" Water-Closet Apparatus, Plate 264-D, as described,	\$61.00
Add, if woodwork is mahogany or bird's-eye maple,	5.00
Add, for 1½-inch Italian marble floor slab, 27x27 inches,	9.00

THE "HELLYER-OXFORD" WATER-CLOSET.

PATENTED.

WITH ANNEX SEAT.

Copyright, 1895, by THE MEYER-SNIFFEN CO., Limited.

PLATE 265-D.

PLATE 265-D consists of the Improved "HELLYER-OXFORD" Water-Closet, patent brass connection and coupling, No. 9 or 10 design "E" tank, brass brackets, brass flush pipe, chain and ivory celluloid pull, and "ANNEX" Seat without cover. All trimmings nickel-plated.

Water-closet bowls with connections for seat ventilation are furnished if desired.

The No. 9 tank is so constructed that a momentary pull of the handle effects the thorough flushing of the closet. It is practically silent in operation, and cannot get out of order.

The No. 10 tank requires to be held a few seconds to thoroughly flush out the closet (the water stopping immediately when the handle is released).

The "HELLYER-OXFORD" Improved, as the illustration shows, is an all-earthenware water-closet, with bowl and trap portion in one piece, having the outlet at the back, and so constructed that the soil pipe may be connected to the closet in such a manner that the joint connecting the soil pipe is below the water line, thus making an indisputable and positive connection with the soil pipe, at the same time retaining the appearance and outside character of the all-earthen closet.

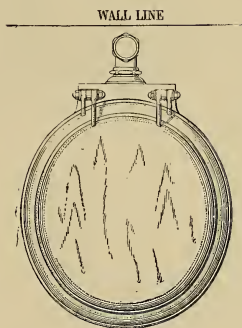

* The "ANNEX" Seat is the simplest and most desirable seat from a sanitary and mechanical point of view. It is neat in appearance, and when raised swings clear from the bowl, leaving an open space between the back of the closet and seat so that all parts of the earthenware can be inspected and easily cleaned.

An open space is left on all sides of the bowl for the broom or duster, and reduces the use of woodwork to a minimum. The most important feature is the method of attaching the hinge to the closet, whereby any possible fracture of the earthenware from improper use of the closet is prevented—an advantage possessed by no other closet seat on the market.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PRICES.

THE "SERVIAN" WATER-CLOSET.

PATENTED.

IMPROVED PEDESTAL PATTERN.

Copyright, 1894, by THE MEYER-SNIFFEN CO., Limited.

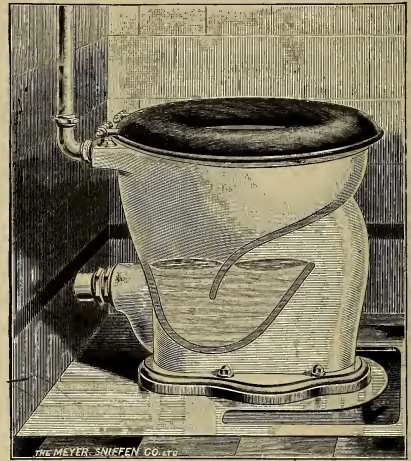

PLATE 268-D.

The depth of the seal and the position of water in the trap is indicated in the cut, showing a model that not only contains a large area and depth of water, but by its form adds greatly to the strength and solidity of the closet.

The peculiar construction of the flushing rim operates to quickly and thoroughly flush out the contents of the bowl. The "back-air" or trap vent that protects the water seal is located at the back.

The advantage claimed for the "SERVIAN" is strength and solidity, making it especially desirable for servants' closet, depots, asylums, etc., where a strong and inexpensive all-earthenware closet is preferred.

Distance from wall to center of the outlet of the closet is 15 inches. Height from floor to center of vent coupling is 5 $\frac{3}{4}$ inches.

THE "SERVIAN" WATER-CLOSET SHOWING DEPTH OF SEAL AND POSITION OF WATER IN THE TRAP, AND THE "ANNEX" SEAT.

PLATE 268-D consists of the "SERVIAN" Water-Closet, with patent brass floor connection, round cornered, design "A" tank, brass brackets, brass flush pipe, chain and ivory celluloid pull, "back-air" to wall, and "ANNEX" Seat without cover. All trimmings nickel-plated.

NOTE.—Unless otherwise ordered the tank furnished with the above apparatus is fitted with a No. 10 plain valve, which it is simply necessary to hold until the closet is thoroughly flushed. If desired we will furnish a No. 9 syphon valve, which thoroughly flushes the closet without being held. This valve (recently improved and patented) is practically silent in operation, and cannot get out of order.

The "SERVIAN" Water-Closet is a wash-down type, formed with a bowl and trap in one piece, having a 2 $\frac{1}{2}$ -inch depth of seal and a large body of water. It is made with unusual strength of material and is recommended where a strong and inexpensive water-closet is required.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PRICES.

THE "PEDESTAL ARTISAN" WATER-CLOSET.

PATENTED.

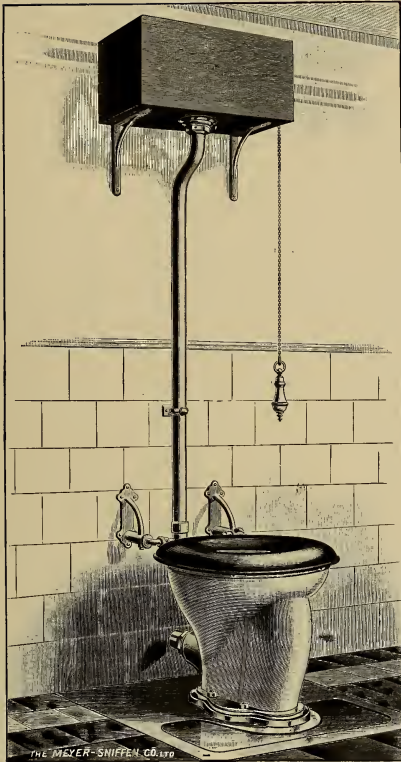

PLATE 274-D.

PLATE 274-D consists of the "PEDESTAL ARTISAN" Water-Closet, with vent coupling, patent brass floor connection, No. 10 "Em-Ess" copper-lined tank, pull and chain and No. 13 seat with galvanized-iron brackets.

The "PEDESTAL ARTISAN" is a short hopper or wash down type of water-closet, formed with bowl and trap in one piece, having a $2\frac{1}{2}$ -inch depth of seal, and a large body of water. It is made of unusual strength of material, and is provided with our patent brass floor connection.

Sectional view of the bowl and seat of Plate 274-D. The depth of the seal and the position of water in the trap is indicated in the cut, showing a model that not only contains a large area and depth of water, but by its form adds greatly to the strength and solidity of the closet.

The peculiar construction of the flushing rim operates to quickly and thoroughly flush out the contents of the bowl. The "back-air" or trap vent that protects the water seal is located at the back.

The advantage claimed for the "PEDESTAL ARTISAN" is strength and solidity, making it especially desirable for servants' closet, depots, asylums, etc., where a strong and inexpensive all-earthenware closet is preferred.

Distance from wall to center of the outlet of the closet is 15 inches. Height from floor to center of vent coupling is $5\frac{3}{4}$ inches. The No. 13 seat, patented, is provided with strong galvanized brackets to screw against the wall, the hinge of seat being arranged to permit its adjustment to different distances, if necessary.

PRICES.

The "PEDESTAL ARTISAN" Water-Closet Apparatus, Plate 274-D, as described,	\$33.50
Add, for hardwood tank in cherry, oak, black walnut, or ash, cabinet-finished or round corner, with nickel or brass-plated brackets,	6.00
Add, for $1\frac{1}{4}$ -inch Italian marble floor slab, 27×27 inches,	9.00
" " cover to seat,	2.50

THE "ADELPHI" WATER-CLOSET

THE "ADELPHI" WATER-CLOSET, illustrated in the following pages, is offered to meet the request of some of our customers for a front outlet water-closet of a better character than is usually found in the market. In this water-closet we have carefully constructed the flush rim to obviate the difficulty of the splashing up of the water in front, even with a strong flush, which has hitherto been an objection to this style of closet. It is made in a solid piece of ornamental design, and can be recommended as being unsurpassed by any other closet of its kind in the market.

NOTE.—"VITREAN" WARE.

All water-closets now furnished by us are made of a non-porous body, designated as "VITREAN" ware. This ware is practically imperishable from use or age, and will not craze or discolor. Being non-absorbent it is considered superior to any other domestic or imported earthenware.

PLATE 72-C OR 276-D.

PLATE 72-C OR 276-D, on page 262, consists of the "ADELPHI" Water-Closet, ivory tint, ornamented in gold lines, with brass floor flange and "back-air" to wall; No. 9 or 10 cherry tank, ornamented with brass bands, brass brackets, brass flush pipe, cherry seat with brackets, and brass chain and celluloid pull. All trimmings nickel-plated.

The woodwork can be furnished in oak, black walnut, or ash, if preferred. The "Annex" or "Affix" seats are now supplied with this closet if desired, which, for description, see pages 255 and 263 respectively.

PRICES.

The "ADELPHI" Water-Closet, Plate 72-C or 276-D, as described,	\$100.00
Deduct, if closet is preferred embossed only, without decoration,	20.00
Add, if woodwork is mahogany or bird's-eye maple,	5.00

PLATE 277-D.

PLATE 277-D consists of the "ADELPHI" Water-Closet, patent brass floor connection and coupling, No. 9 or 10 design "E" tank, brass brackets, brass flush pipe, chain and ivory celluloid pull, straight "back-air" to wall, and "AFFIX" Seat with cover. All trimmings nickel-plated.

Water-closet bowls with connections for seat ventilation are furnished if desired.

The No. 9 tank is so constructed that a momentary pull of the handle effects the thorough flushing of the closet. It is practically silent in operation, and cannot get out of order.

The No. 10 tank requires to be held a few seconds to thoroughly flush out the closet (the water stopping immediately when the handle is released).

The "ADELPHI" is an all-earthenware water-closet, in a solid piece, having the outlet in front. Its lines are such that there is no splashing up of the water in front, which has been the objection heretofore to this style of closet. The ornamental design adds much to its appearance.

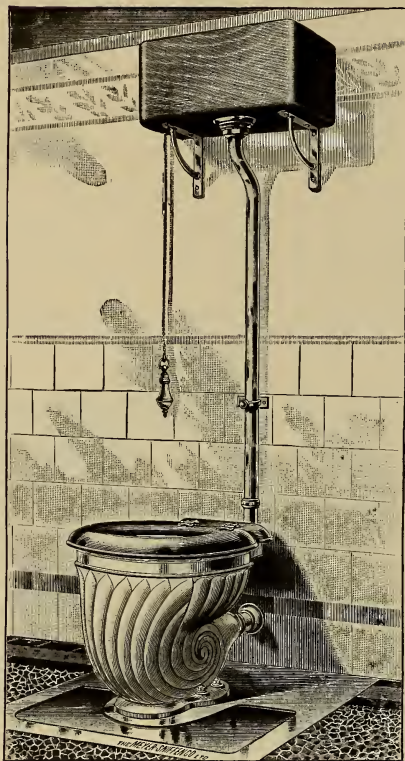

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PLATE 278-D.

PLATE 278-D consists of the "ADELPHI" Water-Closet, patent brass floor connection and coupling, No. 9 or 10 design "A" tank, brass brackets, brass flush pipe, chain and ivory celluloid pull, straight "back-air" to wall, and "AFFIX" Seat without cover. All trimmings nickel-plated.

Water-closet bowls with connections for seat ventilation are furnished if desired.

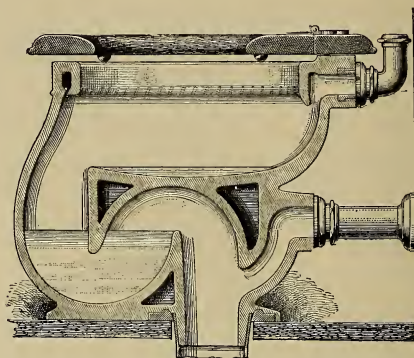

The No. 9 tank is so constructed that a momentary pull of the handle effects the thorough flushing of the closet. It is practically silent in operation, and cannot get out of order.

The No. 10 tank requires to be held a few seconds to thoroughly flush out the closet (the water stopping immediately when the handle is released).

The "ADELPHI" is an all-earthenware water-closet, in a solid piece, having the outlet in front. Its lines are such that there is no splashing up of the water in front, which has been the objection heretofore to this style of closet. The ornamental design adds much to its appearance.

An important feature is the fact that on account of the shape of the bowl the "ADELPHI" closet takes much less water to flush it thoroughly than is usually required. We can furnish with this closet the same styles of tanks, seats, etc., that are illustrated herein with our other water-closet apparatus.

The woodwork furnished is either cherry, oak, black walnut, or ash, as preferred.

PLATE 284-D.

PLATE 284-D consists of the "HELLYER" Short Hopper and Earthen Trap, with brass clamps and coupling, No. 9 or 10 copper-lined tank, japanned brackets, chain and pull.

Water-closet bowls with connections for seat ventilation are furnished if desired.

Plate 283-D is in all respects the same as 282-D, except the seat attachments or levers, which, in this case are arranged by means of a bar across from each partition, which carries the levers. When the partitions are not over 2 feet 6 inches apart, it makes a most desirable and substantial device, both simple, and, as years of experience has demonstrated, practical.

SEAT ACTION WATER-CLOSETS WITH CONTINUOUS TANKS.

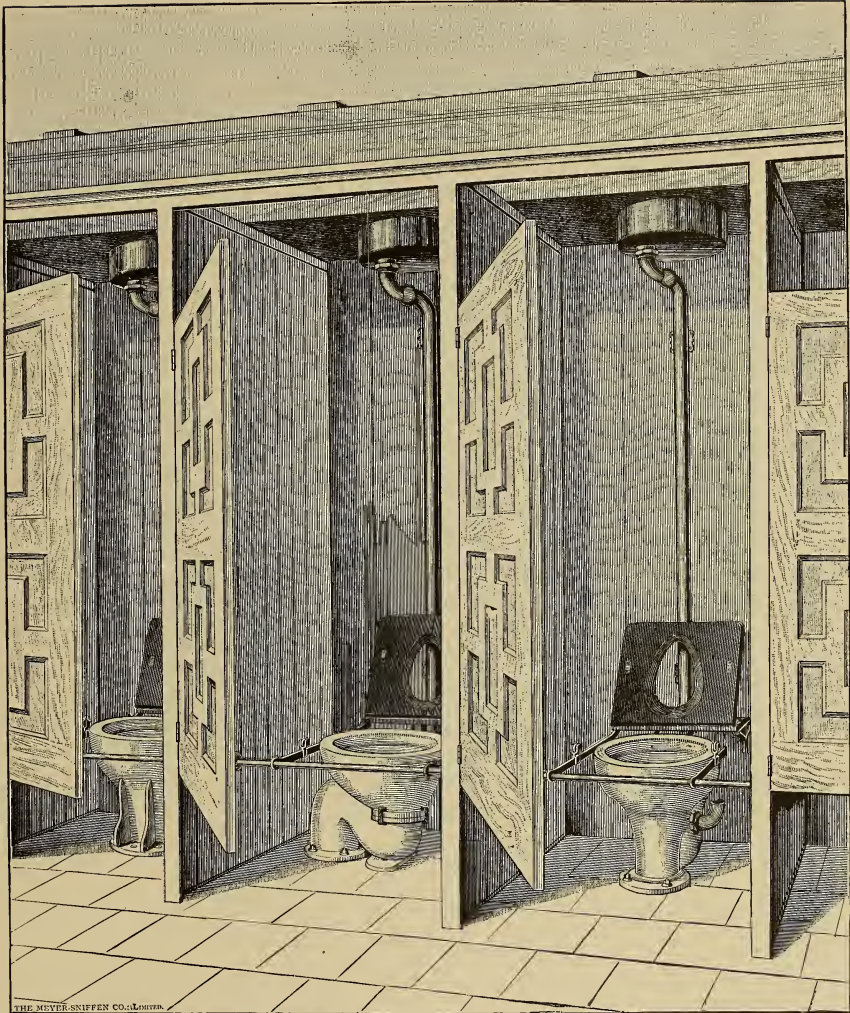

FIG. 1.

FIG. 2.

FIG. 3.

PLATE 285-D.

PLATE 285-D illustrates an apparatus consisting of a row of Water-Closets, with special seat attachments and seats with a continuous tank, fitted with separate brass service boxes. It is specially suited to hotels and institutions where it is desirable to have a quantity of water stored, on account of the supply being at times inadequate to the demand. Figure 1 shows the "HELLYER ARTISAN" HOPPER. Figure 2 shows the "HELLYER" SHORT HOPPER. Figure 3 shows the IMPROVED "BRIGHTON." The seat attachments arranged in this manner are, no doubt, the strongest and best to insure durability under severe usage, provided the distance between partitions is not more than 2 feet 6 inches; other seat attachments of course can be substituted if desired, such as are illustrated in Plate 280-D.

PRICE.

Prices on above apparatus, Plate 285-D, will be furnished on application.

LAVATORY APPARATUS.

IN THE following pages we illustrate several different types of wash-basins and complete lavatory apparatus. It is obvious that it is quite impossible to illustrate all the different combinations that may be made with our wash-basins and their appurtenances, as the sizes of slabs and their shapes are quite often preferred to conform to the size of the space in which they are to be located.

The "York" waste we recommend as the most simple and satisfactory Lavatory waste from a sanitary or mechanical point of view. Several years' experience has proven its entire practicability.

We desire to call special attention to the construction of the overflow in the "Brighton" Wash-Basin. It is well known that the weak point, in a sanitary point of view, of a wash-basin is the overflow; we believe, in the "Brighton" overflow we have devised one that is simpler and nearer to perfection in this point than any other wash-basin in the market. We invite careful inspection, and believe it will be found on comparison that our Lavatory Apparatus are not equalled by any other manufacturers.

NOTE.—"VITREAN" WARE.

All basins now furnished by us are made of a non-porous body, designated as "VITREAN" ware. This ware is practically imperishable from use or age, and will not craze or discolor. Being non-absorbent it is considered superior to any other domestic or imported earthenware.

THE "EM-ESS" OPEN LAVATORY.

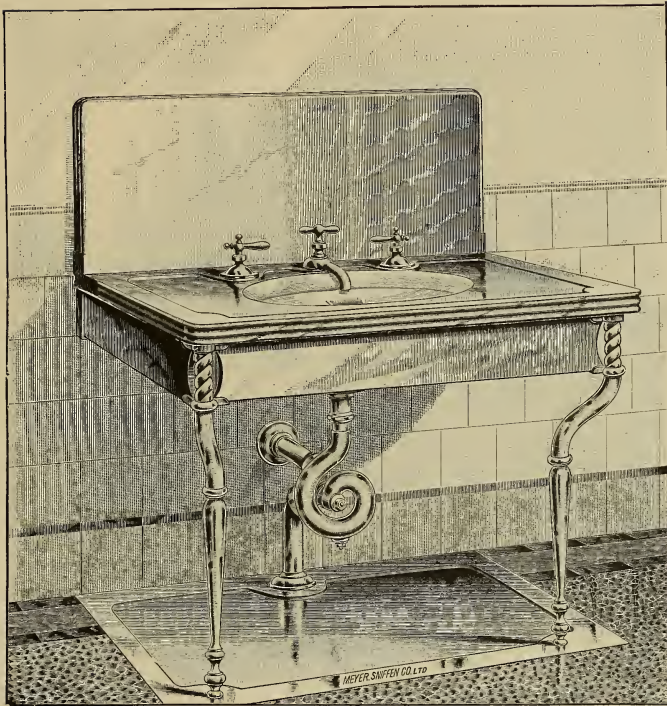

PLATE 286-D.

PLATE 286-D consists of the "BRIGHTON" oval wash-basin, 19x15 inches, with "Fuller" supply combination and "York" waste, Italian marble countersunk slab, 33x23 inches, with 16-inch back and 5-inch aprons, No. 16 legs, and No. 8 "Spiro" trap. All trimmings polished brass or nickel-plated.

The "York" waste we recommend as the most simple and satisfactory lavatory waste from a sanitary or mechanical point of view. Several years' experience has proven its entire practicability.

The "Spiro" trap (patented) is unequalled in its depth of seal and adaptability, and also adds much to the appearance of the Lavatory.

PRICES.

Plate 286-D, as described,	\$100.00
If No. 15 legs are substituted for No. 16,	74.00
Add, for supply pipes to floor,	5.50
If "ALPHA" basin is substituted for the "BRIGHTON," deduct	3.50
Add, for Italian marble floor slab, 33x23 inches,	12.00

Slabs for the above Lavatory can be furnished in any of the American marbles, also in Mexican and African onyx, rose jasper, sienna, Numidian, and other imported marbles, for which special prices will be quoted on application.

THE "EM-ESS" OPEN LAVATORY.

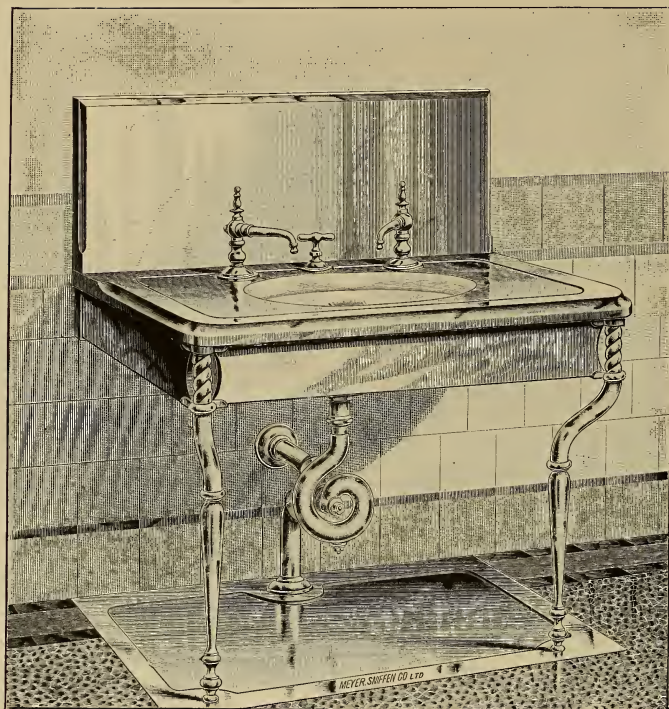

PLATE 287-D.

PLATE 287-D consists of the "BRIGHTON" oval wash-basin, 19x15 inches, with "York" waste and No. 1 "Em-Ess" swing faucets, Italian marble countersunk slab, 33x23 inches, with 16 inch back and 5-inch aprons, No. 16 leg, and No. 8 "Spiro" trap. All trimmings polished brass or nickel-plated.

The "York" waste we recommend as the most simple and satisfactory lavatory waste from a sanitary or mechanical point of view. Several years' experience has proven its entire practicability.

The "Spiro" trap (patented) is unequalled in its depth of seal and adaptability, and also adds much to the appearance of the Lavatory.

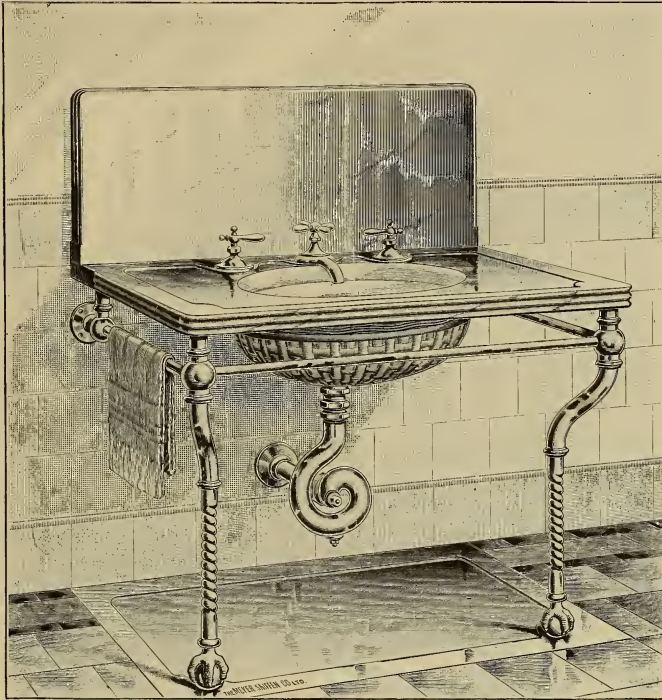

PRICES.

Plate 287-D, as described,	\$98.00
If No. 15 legs are substituted for No. 16,	72.00
Add, for supply pipes to floor,	5.50
If "ALPHA" basin is substituted for the "BRIGHTON," deduct	3.50
Add, for Italian marble floor slab, 33x23 inches,	12.00

Slabs for the above Lavatory can be furnished in any of the American marbles, also in Mexican and African onyx, rose jasper, sienna, Numidian, and other imported marbles, for which special prices will be quoted on application.

THE "EM-ESS" OPEN LAVATORY.

PATENTED.

Copyright, 1895, by THE MEYER-SNIFFEN CO., Limited.

PLATE 288-D.

PLATE 288-D consists of the "BRIGHTON" oval wash-basin, 19x15 inches, embossed, with "York" waste and "Fuller" supply combination, Italian marble countersunk slab, 33x23 inches, with 16-inch back, "Victor" (offset legs) supporting apparatus, and No. 6 "Spiro" trap. All trimmings polished brass or nickel-plated.

The "Victor" supporting apparatus, for open lavatories, in dispensing with all superfluous corners and pockets is a development in the direction of utility as well as sanitary perfection.

The rod connecting the legs and securing the slab to the wall is designed to be used as a towel rack. The apparatus as a whole combines in a simple outfit a most complete lavatory.

The No. 2 "Victor" supports are in every way equal to the apparatus illustrated; being designed specially for economy, we are enabled to thus reduce the price.

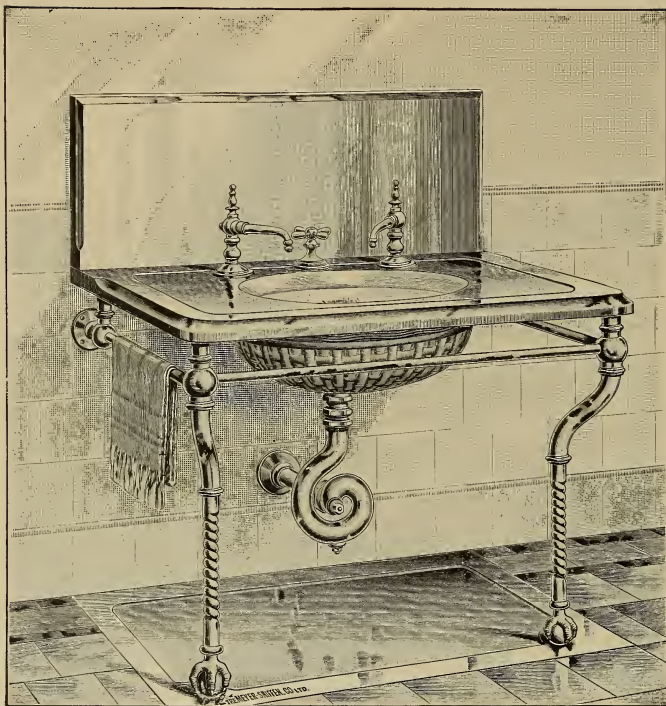

PRICES.

Plate 288-D, as described,	\$98.00
If with No. 2 "Victor" supporting apparatus,	78.50
Add, for Italian marble floor slab, 33x23 inches,	12.00

Slabs for the above Lavatory can be furnished in any of the American marbles, also in Mexican and African onyx, rose jasper, sienna, Numidian, and other imported marbles, for which special prices will be quoted on application.

THE "BRIGHTON" BASIN,

WITH

THE "YORK" WASTE* AND FULLER DOUBLE SUPPLY COMBINATION.

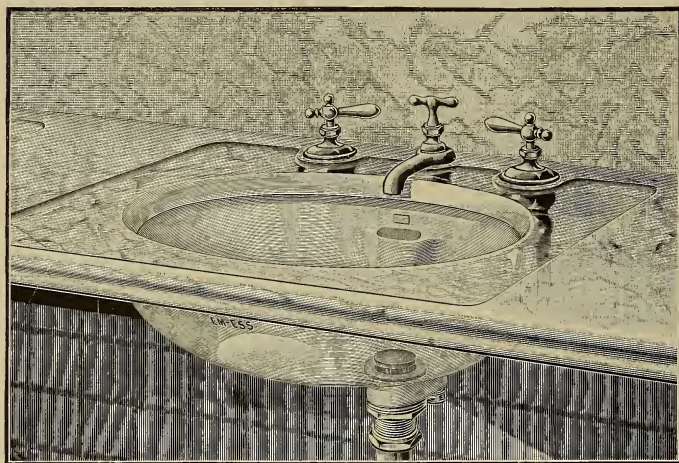

PLATE 303-D.

PLATE 303-D consists of the "BRIGHTON" Oval Basin and "York" waste, with Fuller double supply combination—nickel-plated.

A feature of the "BRIGHTON" Basin is the overflow, which is so arranged as to be readily inspected and cleaned. In this lavatory fixture the handles of the faucet only are above the marble, and the supply nozzle is at the center of the bowl, low down, so that there are no projecting parts "in the way." The handle of the "York" waste comes through the back of the nozzle and operates the stopper.

A four-arm handle is now furnished with the "York" waste.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown open in the cut, being revealed by the transparent appearance of the basin), is opened and closed by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of its kind ever put upon the market, and it is also most satisfactory from a mechanical or sanitary point of view.

For sectional view of "BRIGHTON" basin and "York" waste see page 301.

PRICES.

Plate 303-D, with 17x14-inch basin,	\$23.00
" " " 19x15 " "	24.00
" " " 21x16 " "	25.00

Price does not include marble.

THE "BRIGHTON" BASIN,

WITH

THE "YORK" WASTE* AND "EM-ESS" DOHERTY SELF-CLOSING
SUPPLY COMBINATION.

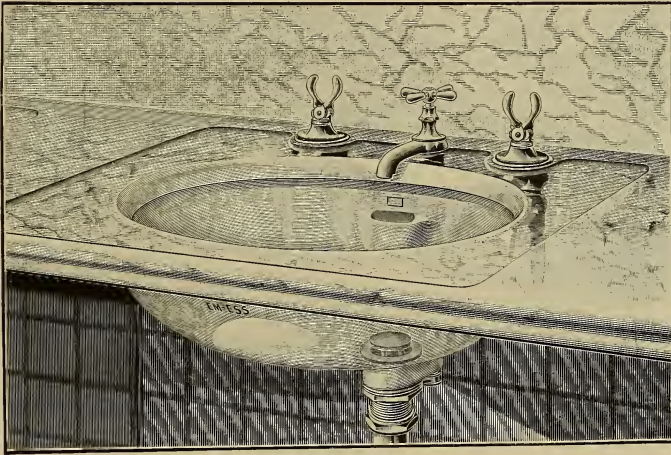

PLATE 306-D.

PLATE 306-D consists of the "BRIGHTON" Oval Basin and the "York" waste, with "Doherty" self-closing double-supply combination cock.

A feature of the "BRIGHTON" Basin is the overflow, which is so arranged as to be readily inspected and cleansed. In this lavatory fixture the handles of the faucet only are above the marble, and the supply nozzle is at the center of the bowl, low down, so that there are no projecting parts "in the way." The handle of the "York" waste comes through the back of the nozzle and operates the stopper.

This lavatory is recommended for hotels, office buildings, and other public places where a perfectly sanitary basin is desired without any liability of waste of water. The low-down nozzle prevents the use of the basin for drawing water into pails, etc.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown open in the cut, being revealed by the transparent appearance of the basin) is opened and closed by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of the kind ever put on the market, and it is also most satisfactory from a mechanical or sanitary point of view.

For sectional view of "BRIGHTON" Basin and "York" waste see page 301.

THE "PEMBERTON" BASIN,

WITH

THE "YORK" STANDING WASTE* AND "EM-ESS" GROUND-KEY

SWING BASIN COCKS.

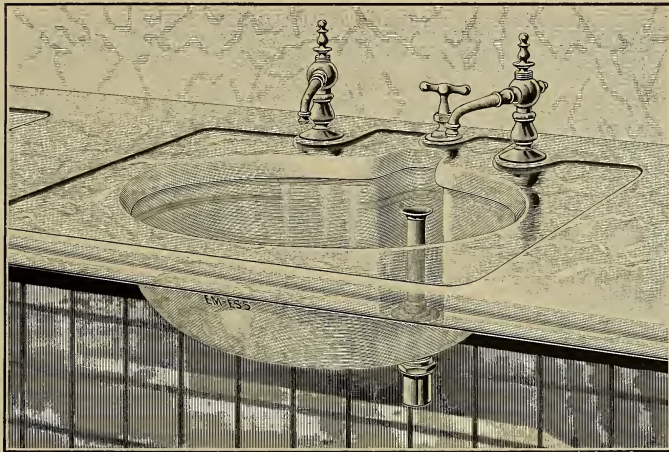

PLATE 308-D.

PLATE 308-D consists of the "PEMBERTON" Recessed Basin, and the "York" standing waste, with No. 1 "EM-Ess" ground-key, swing basin cocks—nickel-plated.

*To those who prefer a standing waste in a recess basin, we commend the "Pemberton" Basin and "York" Waste. The illustration shows the basin fitted to a slab, and showing the recess in the basin with the overflow stand-pipe its entire length; that part of the apparatus in the cut in front of the recess being represented as transparent. A slight turn of the handle at the back of the slab raises or lowers the standing waste, and when lifted up can be easily removed and replaced without disturbing the mechanism in any way. All things considered, it seems to be the most perfect arrangement of its kind in the market, the means of lifting and holding the same in place being most simple and ingenious, and it seems to us to be most satisfactory, and, unquestionably, the most cleanly.

For sectional view of the "PEMBERTON" basin and "York" standing waste see page 303.

PRICES.

THE "ALPHA" BASIN,

WITH

THE "YORK" WASTE* AND FULLER DOUBLE SUPPLY COMBINATION.

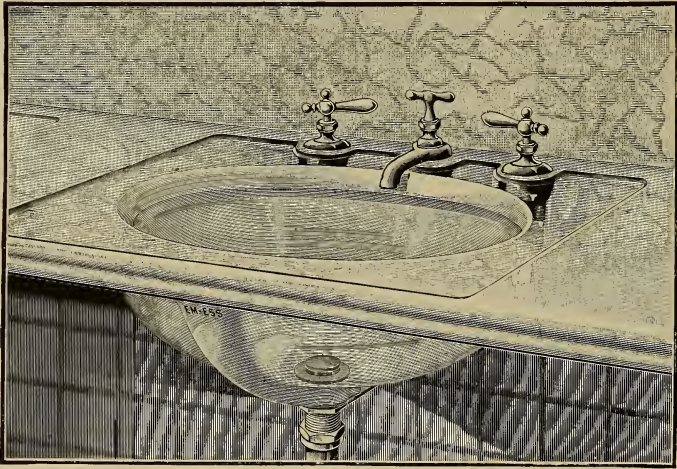

PLATE 309-D.

PLATE 309-D consists of the "ALPHA" Oval Basin and "York" waste, with Fuller double supply combination—nickel-plated.

In this lavatory fixture the handles of the faucet only are above the marble, and the supply nozzle is at the center of the bowl, low down, so that there are no projecting parts "in the way." The handle of the "York" waste comes through the back of the nozzle and operates the stopper.

A four-arm handle is now furnished with the "York" waste.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown within as if the basin was transparent) is opened by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of its kind ever put on the market, and it is also most satisfactory from a mechanical and sanitary point of view.

The feature of the "ALPHA" Basin is the overflow, which is provided with a hinged strainer (patented), and is placed on the front of the bowl, making the opening quite invisible but capable of being easily cleansed.

PRICES.

Plate 309-D, with 17x14-inch basin,	\$20.00

THE "ALPHA" BASIN,

WITH

THE "YORK" WASTE* AND "EM-ESS" FULLER BASIN COCKS.

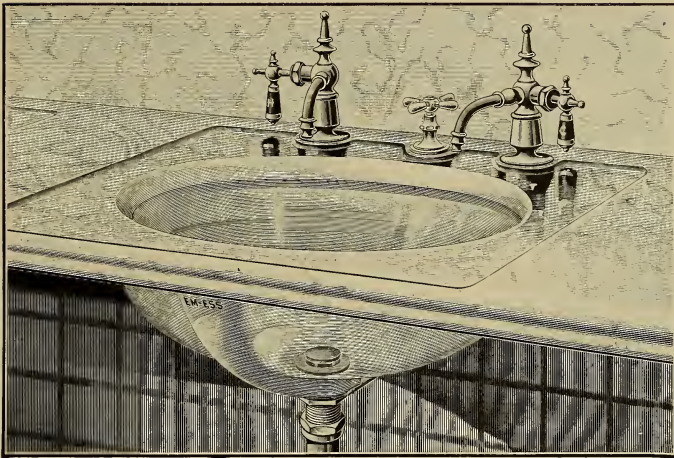

PLATE 310-D.

PLATE 310-D consists of the "ALPHA" oval basin and the "York" waste, with No. 13 special "Em-Ess" Fuller basin cocks, with white or black porcelain lettered handles—nickel-plated.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown open in the cut, being revealed by the transparent appearance of the basin) is opened and closed by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of its kind ever put upon the market, and it is also most satisfactory from a mechanical or sanitary point of view.

A feature of the "ALPHA" basin is the overflow, which is provided with a hinged strainer (patented), and is placed on the front of the bowl, making the opening quite invisible but capable of being easily cleansed.

PRICES.

THE "ALPHA" BASIN,

WITH

THE "YORK" WASTE* AND "EM-ESS" COMPRESSION BASIN COCKS.

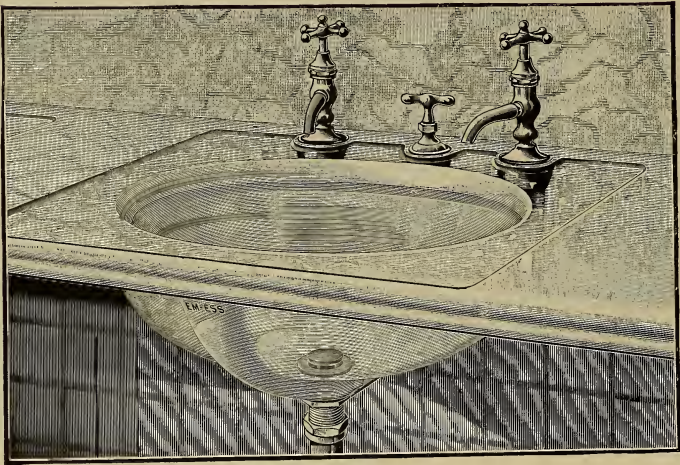

PLATE 311-D.

PLATE 311-D consists of the "ALPHA" Oval Basin and the "York" waste, with No. 1 "Em-Ess" compression four-arm handle basin cocks—nickel-plated.

A four-arm handle is now furnished with the "York" waste.

The feature of the "ALPHA" Basin is the overflow, which is provided with a hinged strainer (patented), and is placed on the front of the bowl, making the opening quite invisible but capable of being easily cleansed.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown open in the cut being revealed by the transparent appearance of the basin) is opened and closed by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of its kind ever put on the market, and it is also most satisfactory from a mechanical or sanitary point of view.

Plate 311-D, with 17x14-inch basin,	\$15.50
" " " 19x15 " "	16.00
" " " 21x16 " "	17.50

Price does not include marble.

THE "ALPHA" BASIN,

WITH

THE "YORK" WASTE* AND "EM-ESS" DOHERTY SELF-CLOSING
SUPPLY COMBINATION.

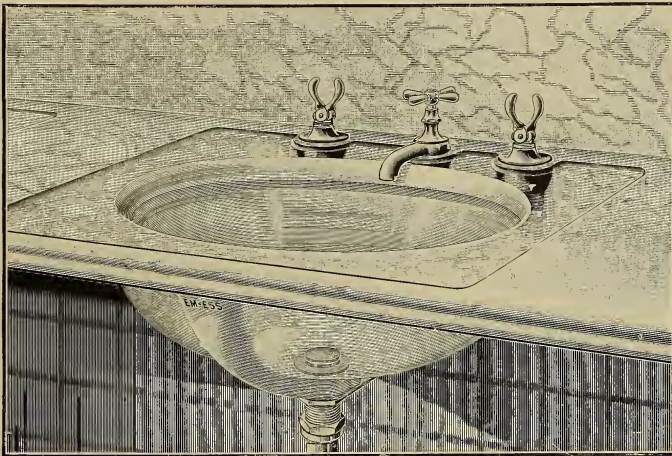

PLATE 312-D.

PLATE 312-D consists of the "ALPHA" oval basin and the "York" waste, with "Doherty" self-closing double-supply combination cock. Nickel-plated.

*The "York" waste takes the place of a plug and chain or the lifting hidden overflow. The stopper (shown within as if the basin was transparent) is opened by a slight turn of the handle at the back of the slab, and may be taken out and replaced at will. The arrangement is perhaps the most simple and ingenious of its kind ever put on the market, and it is also most satisfactory from a mechanical and sanitary point of view.

This lavatory apparatus is recommended for hotels, office buildings, and other public places where a perfectly sanitary basin is desired without any liability of waste of water. The low-down nozzle prevents the use of the basin for drawing water into pails, etc.

The feature of the "ALPHA" Basin is the overflow, which is provided with a hinged strainer (patented), and is placed on the front of the bowl, making the opening quite invisible but capable of being easily cleansed.

THE RECESSED FRONT LAVATORY.

ENGLISH PATENT.

SLAB AND BASIN IN ONE PIECE, WITH BRIGHTON OVERFLOW.

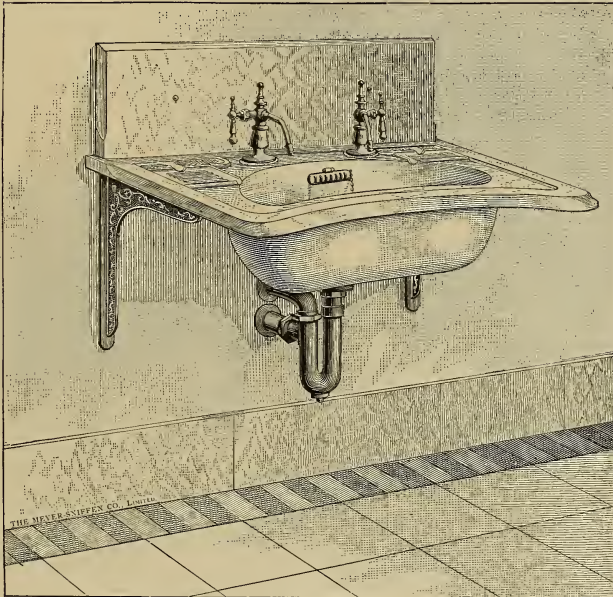

PLATE 314-D.

299 PLATE 314-D consists of an all-earthenware slab and basin combined in one piece, with a very large peculiarly-shaped basin, soap and brush tray formed in the piece, with the "BRIGHTON" Clean-out Overflow. Marble back, No. 2½ "FULLER" basin cocks, No 2 brass trap, with waste, and bronzed brackets.

This is a practical and inexpensive lavatory, and, having our "BRIGHTON" Overflow, it is highly commended in a sanitary point of view. It is *very strong*, made of the best English earthenware, and either for office or private house its use is recommended by us as a most desirable, cleanly fixture.

DIMENSIONS.

Length, 25 inches; width, 20 inches, 8 inch marble back. Size of basin, *inside*, 20 x 13 inches.

PRICE.

Plate 314-D, as described,	\$37.50
If with "York" waste instead of plug and chain,	46.00
Add, for ball brackets same as plate 301-D,	7.50

THE RECESSED FRONT CORNER LAVATORY.

ENGLISH PATENT.

SLAB AND BASIN IN ONE PIECE WITH "BRIGHTON" OVERFLOW.

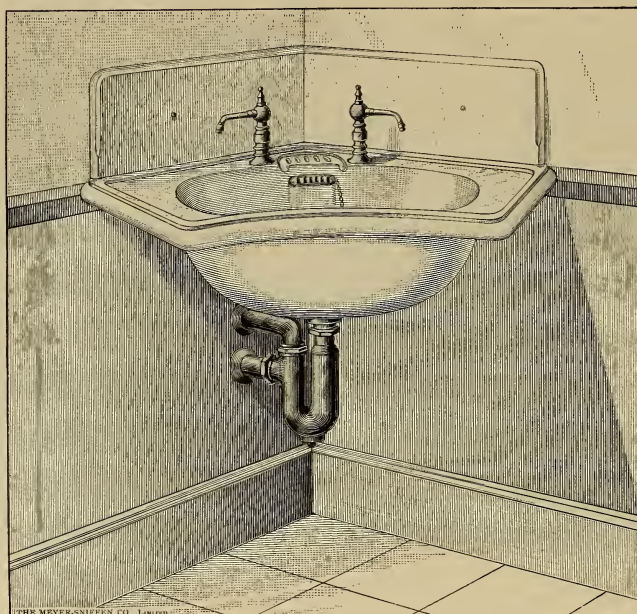

PLATE 315-D.

PLATE 315-D consists of an all earthenware corner slab and basin combined in one piece, with a very large peculiarly shaped basin, with soap tray formed in the piece, and with the "BRIGHTON" clean-out overflow, marble sides, No. 2 brass trap, and "EM-Ess" basin cocks.

This is a practical and inexpensive lavatory, and having our "BRIGHTON" overflow, it is highly commended in a sanitary point of view. It is *very strong*, made of the best English earthenware, and either for office or private house its use is recommended by us as a most desirable, cleanly fixture.

Size : 18 inches on the sides.

PRICES.

Plate 315-D, as described,	\$34.00
If with "York" waste instead of plug and chain,	42.50

THE "PEMBERTON" BASIN WITH "YORK" STANDING WASTE.

PATENTED.

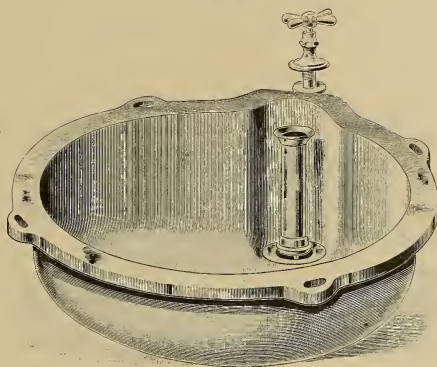

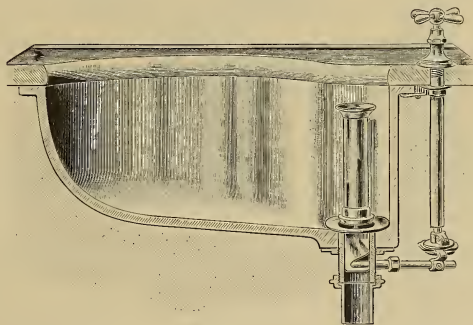

PLATE 318-D.

We recommend the "PEMBERTON" Basin and "York" Standing Waste as the most perfect apparatus of its type on the market. Several years' experience has demonstrated its practical value and impossibility of getting out of order.

Sizes; 17x14 inches and 19x15 inches.

SECTIONAL VIEW.

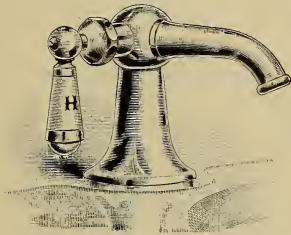

Referring to the sectional cut, it will be seen that the stand-pipe is guided within the opening by a thin sheet of metal into which a slot is cut. A rod operating from the handle by an ingenious eccentric device enters the slot and raises or lowers the stand-pipe as desired. The arrangement offers no obstruction to the escape of the water into the waste pipe and permits the taking out of the stand-pipe when it is desired to clean the overflow.

THE "SPIRO" TRAP.

PATENTED.

No. 6. Adjustable Inlet Connection

PLATE 328-D.

No. 8. Adjustable Inlet Connection.

PLATE 329-D.

THE "SPIRO" TRAP FOR OPEN LAVATORIES.

The "SPIRO" trap has an unusual depth of seal as well as important self-scouring properties. The arrangement of the outlet from the trap between the down and up leg permits an alignment of the waste pipe with the opening of the basin, which, aside from its attractive appearance, is an advantage in the adjusting of the waste pipe.

A cleanout screw is provided for the waste, as well as the trap itself. The superiority of a continuous pipe trap over a casing or solid trap with partitions is well-known to sanitary experts.

PRICES.

Plate 328-D. with waste and vent thimble for back of wall, and escutcheon—polished brass,	\$11.00
" 329-D, " " pipe to floor, and "back-air" to wall, including vent thimble back of wall and escutcheon—polished brass,	14.50

FOR

STORES, OFFICES, HOTELS, SCHOOLS, ETC.

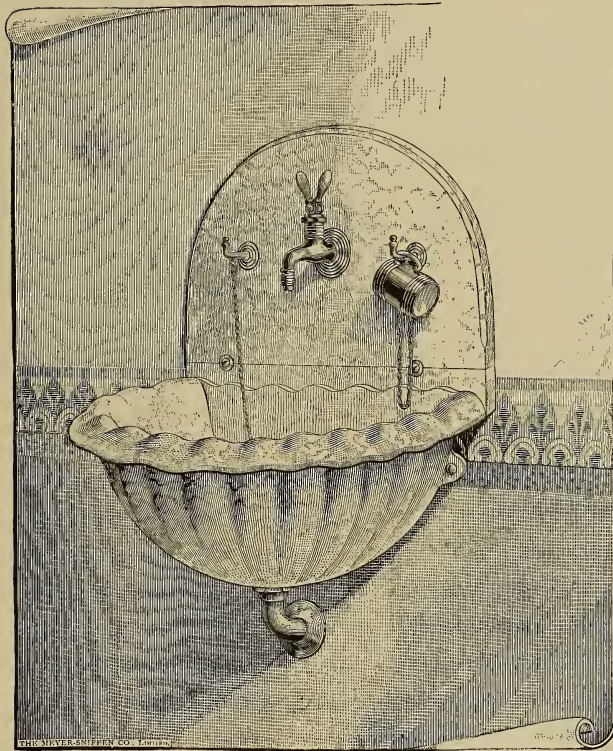

PLATE 345-D.

PLATE 345-D consists of the finest Imported Marbleized Earthenware Basin formed to represent carved marble, and when fitted up as shown, with marble back, "DOHERTY" self-closing cock, drinking cups, etc., silver-plated, makes a complete and desirable fixture for the purpose intended. The Basin, if desired, can be furnished in plain white or ivory tint.

DIMENSIONS.

Width of Basin, $18\frac{1}{2}$ inches; height of marble back, 12 inches; distance from center of the waste outlet of basin through the wall to the supply inlet, 16 inches. The marble back may be had in any desired shape.

PRICE.

Plate 345-D, as described,	\$35.00
If with nickel-plated trimmings,	30.00

THE "TUCKER" GREASE TRAP.

THE necessity for the use of a Grease-Trap under kitchen and butler's pantry-sinks is too well recognized by sanitary engineers, architects, and plumbers to require any argument. The frequent stoppage of drain-pipes which receive the waste water from kitchens of hotels, restaurants, and private houses where much dish-washing is done, is well known to those who have suffered the annoyance and been obliged to pay for the frequent removal of the clogging grease.

The "TUCKER" GREASE-TRAP is the best device, in our opinion, yet designed for that purpose.

It is believed that the money received from the sale of the grease obtained from this trap will in a very few months pay for the article itself.

We can furnish testimonials from prominent parties, who have had this trap in use for the past five or six years.

This is the only Grease-Trap made in which there is a separate chamber, through which cold water circulates with the effect of chilling the trap and congealing the grease so that it can be readily removed before it reaches the waste-pipe. These traps are made without seams, of heavy cast brass and iron, and are capable of standing any city water-works pressure that may be laid on to the chilling chamber. Experience of twelve years has fully proven what is claimed for them, and abundance of testimonials of their effectiveness can be furnished if desired.

The grease, when congealed by the chilling of the trap, will float on the surface where it can be easily removed from the top after taking off the cover to the trap. The outlet of the trap being at or near the bottom, the grease cannot escape into the waste-pipe.

THE "TUCKER" GREASE TRAP.

PATENTED.

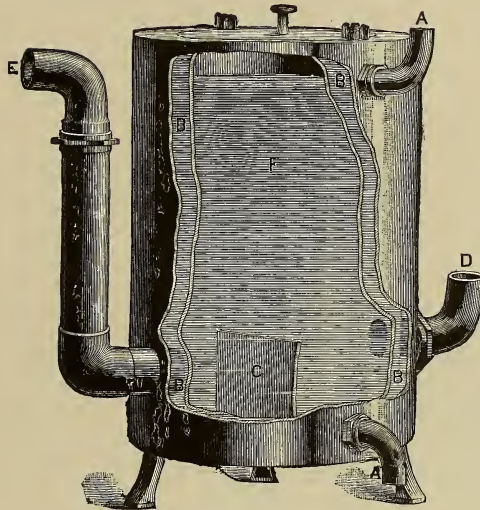

PLATE 350—D.

No. 3.

PLATE 350-D consists of the No. 8 "TUCKER" Grease Trap, hotel pattern, made of cast iron and adapted for the use of restaurants, hotels, clubs, institutions, and large private houses, where one trap of the proper size can be connected to one or more sinks. We have been informed that sufficient grease has been saved by the "TUCKER" Trap in a short time to pay the cost of the trap.

DIMENSIONS.

No. 3, hotel pattern, height 24 inches, diameter 16 inches, with 1-inch circulating and 2-inch waste couplings; No. 5, hotel pattern, height 21 inches, diameter 21 inches, with 2-inch circulating and waste couplings; No. 6, hotel pattern, height 23 inches, diameter 28 inches, with 2-inch circulating and waste couplings.

The description of the workings of the No. 2 trap will also describe those of Nos. 3, 5, and 6.

THE "EM-ESS PARSONS" SCHOOL WATER-CLOSET.

PATENTED.

The "EM-ESS PARSONS" School Water-Closet has been successfully used in schools, factories, etc., for several years past. The arrangement of each basin in the section at a slightly lower level, with its weir or dam toward the outlet, is novel and important, securing an equal flush to each, with a minimum quantity of water—an important consideration when meter rates have to be paid. The flush is automatic at desired intervals.

The "EM-ESS PARSONS" School Water-Closet comprises a system of two, three, four, five or six to twelve part wash-out water-closets combined in one apparatus, operated by one tank up to a six-part closet; above six, and up to a twelve-part closet, the apparatus is operated by two tanks, one at each end, but with a single outlet.

Hitherto water-closets for schools, factories, barracks, institutions and similar places have been confined to school-sinks, latrines, or vaults, which retain their filth for stated periods, until their contents are discharged by an attendant. The introduction of the "PARSONS" system by us, however, eight years ago, and its unqualified success, leads us to believe that its general adoption in the above-mentioned places, where water-closets are exposed to very rough usage, is only a question of time. The results secured in the design of the "EM-ESS PARSONS" School Water-Closet, are the advantage of having a body of water such as is found in a wash-out closet, that may be automatically removed with all its contents at predetermined intervals. The flush tank may be easily regulated to empty its contents with certainty at any given period; the quantity of water, also, may be controlled as desired.

THE "EM-ESS PARSONS" SCHOOL WATER-CLOSET.

PATENTED.

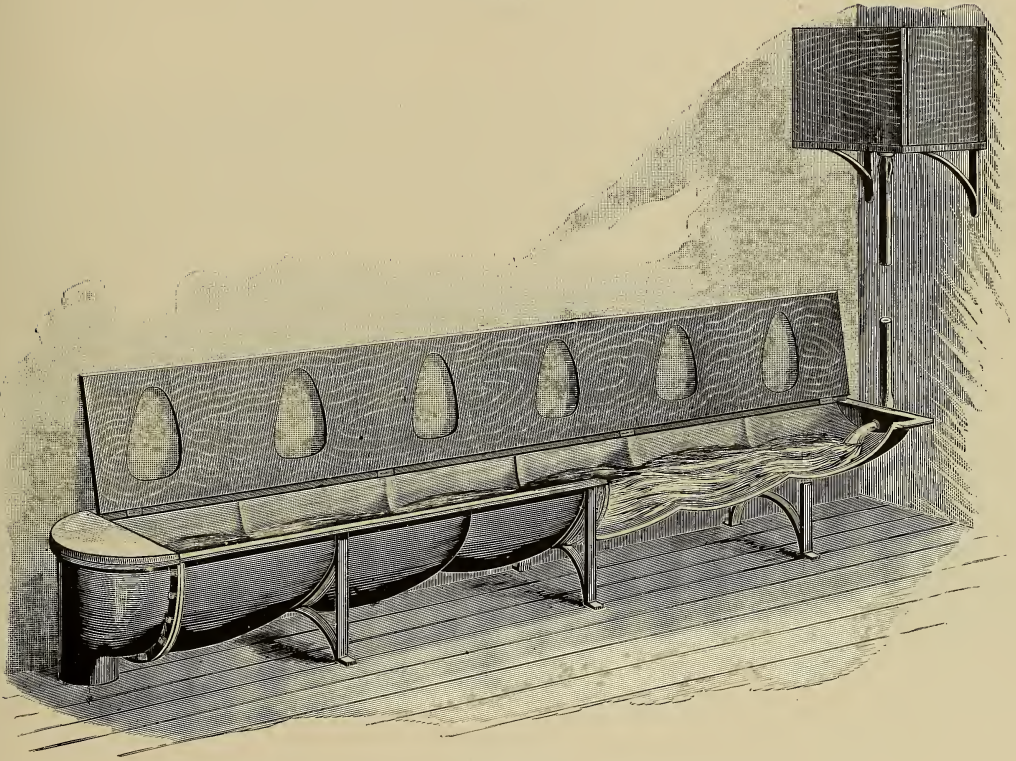

PLATE 380-D.

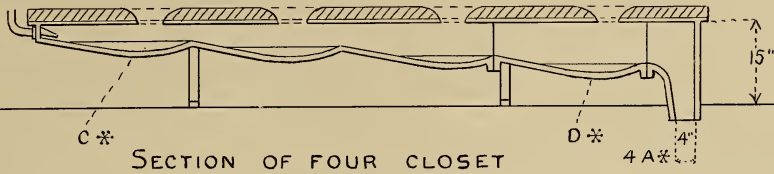

PLATE 380-D consists of a six-part "EM-ESS PARSONS" School Water-Closet, with periodical flushing tank and iron standards, showing the water in motion.

Distance between centers of basins, 27 inches.

THE "EM-ESS" DOHERTY SELF-CLOSING FAUCET.

THESE FAUCETS have been used for the last eighteen years, and although subjected to the most severe usage we have never had a complaint of their sticking open, this result being due to the care exercised in their manufacture and the ingenious application of the double lever.

Numerous imitations have appeared on the market as the natural result of the reputation and popularity these Self-Closing Faucets have acquired, and of our guarantee to keep them in repair. In New York and vicinity we keep the "EM-Ess" Doherty Faucets in repair for three years without charge.

The curved handles shown in the illustration are a recent improvement (patented) we have adopted. This feature improves the appearance of the Faucet, makes it easier to hold open, as the levers may be grasped in the hand. It also prevents persons so disposed from tying the levers together.

All Faucets that are genuine are will bear the stamp "EM-Ess" Doherty as shown.

If this Self-Closing Faucet is wanted please plainly specify the "EM-Ess" Doherty and look for the stamp as above.

THE "EM-ESS" FULLER FAUCETS.

CONSPICUOUS among the water supply fittings regarded as standard articles are the "EM-ESS" Fuller Faucets.

For more than twenty years these faucets have stood the test of popular usage under the most severe conditions, and without regard to the character or temperature of the water passing through them, and they are to-day regarded with the utmost favor by experienced architects, plumbers, and householders, who do not look at first cost merely.

If imitation be an indorsement we have had ample testimony as to their quality and reliability, in the imitations of the "EM-ESS" Fuller Faucets which have been placed upon the market since we succeeded in establishing a reputation for them.

We give a guarantee to keep them in repair in this city for three years, but as there are several imitations, we would respectfully ask, that before sending to us to do repairs to faucets believed to be the "EM-ESS" Fuller, parties will make sure they are the genuine article, *bearing our stamp*.

For the benefit of those interested, we mention some points of superiority which these faucets have:

They have an elastic valve and a metal seat, and shut with the water pressure, hence, they will not leak.

They have a tapered nut at the end of the stem, to avoid water hammer or concussion in the pipes.

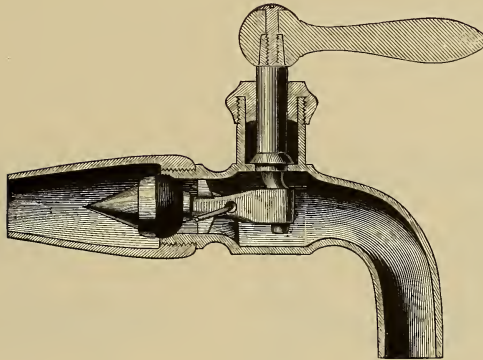

They open and close with extreme ease.

They may be easily repaired, the body of the faucet may be unscrewed with the utmost ease.

They are, all things considered, the most durable faucets made.

To get the genuine article, specify the "EM-ESS" Fuller Work, manufactured by THE MEYER-SNIFFEN CO., Limited, and see that it bears that firm's stamp.

THE "EM-ESS" FULLER FAUCET.

SECTIONAL VIEW.

The valve is conical shaped and closes with the pressure. It is opened by turning the handle in either direction, one-half turn opening it to its full capacity. Its great durability arises from the fact that no amount of turning or twisting the handle creates any extra pressure on the valve. Some time ago we introduced a guide in the stem that completely corrects any tendency to rattle under heavy pressure. The body of the faucet is easily unscrewed, and the valve may be replaced when worn.

THE "EM-ESS" GROUND KEY FAUCETS.

WE herewith illustrate a few of the many styles of GROUND KEY FAUCETS which we manufacture. The GROUND KEY work made by us and bearing our stamp, is extra heavy in weight, and so proportioned as to secure the maximum of durability. The very best "steam metal" is used in these faucets; they are carefully ground by hand, and in this city (New York), they are guaranteed against leakage for three or more years, and when silver plated by us the plating is warranted for a like period. For convenience in use, no style of faucets for basins is more appreciated than that known as the "GROUND KEY" or "SWING" FAUCET, and when properly made, none is better where the water is free of grit. Of late years competition, and the desire of some builders to sacrifice everything to low prices, has resulted in this class of work being made of cheap metal, from light and improperly proportioned patterns, and hastily ground by machinery. As a consequence these faucets soon leaked, and all GROUND KEY work was looked on with suspicion. The remark has often been made, "Twenty-five years ago we used to get GROUND KEY work that would outlast anything made; why can't we do it now?" We make work of this character, and are prepared to guarantee it.

When ordering or specifying, describe as the "EM-ESS" GROUND KEY work made by THE MEYER-SNIFFEN CO., LIMITED.
